

Creating a Virtual Machine (In VMWare Workstation Pro/Player)

By Justin Mah

Requirements

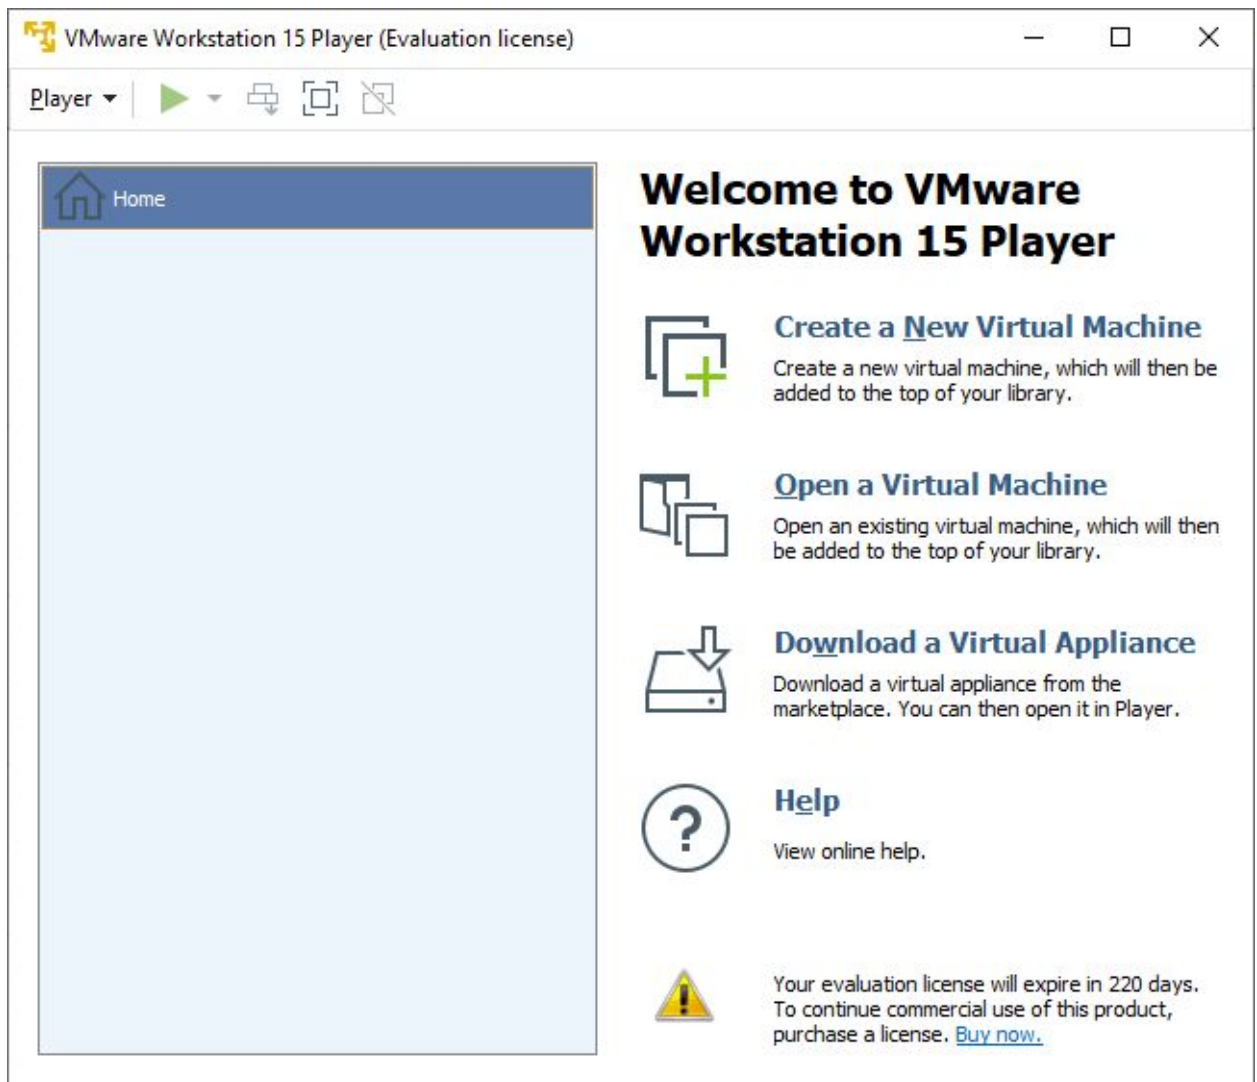

- VMWare Workstation Pro/Player (Player can be downloaded for free here: <https://www.vmware.com/ca/products/workstation-player.html>)
- An ISO containing an Operating System (Windows Trials: <https://www.microsoft.com/en-us/evalcenter/>) (Linux Distributions: <https://www.linux.org/pages/download/>)

Note: download and install VMware Workstation Pro/Player before proceeding

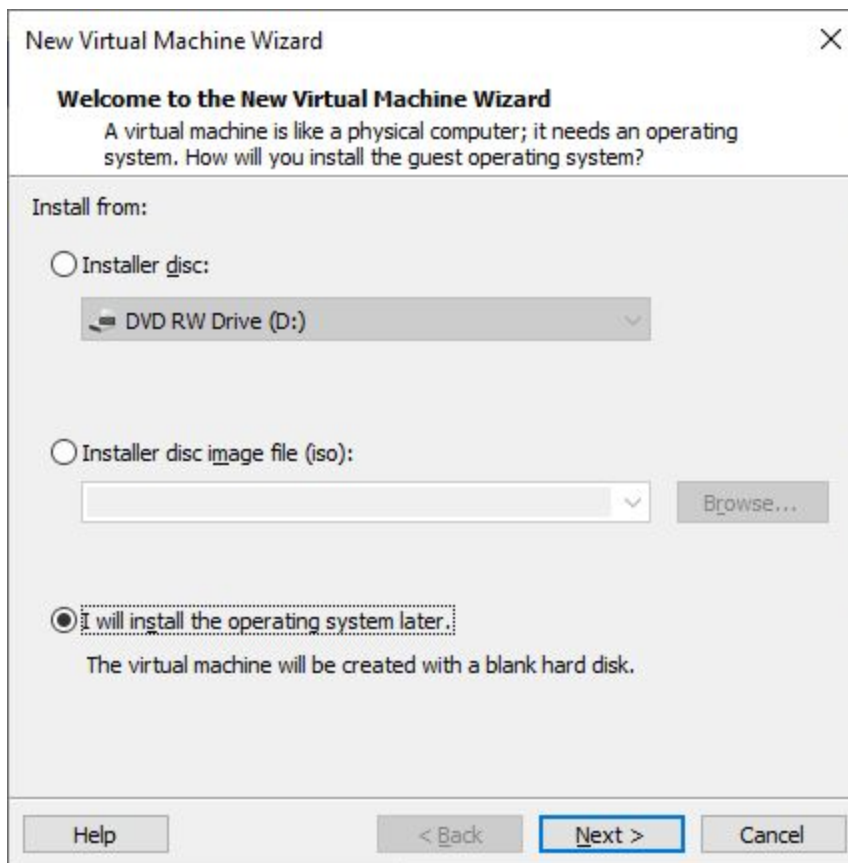

Instructions

Note: I will be using VMWare Workstation Player for this tutorial, the steps are the same if using VMWare Workstation Pro.

- 1) Start VMware workstation
- 2) Click “Create a New Virtual Machine”

- 3) Select “I will install the operating system later”

New Virtual Machine Wizard

Welcome to the New Virtual Machine Wizard

A virtual machine is like a physical computer; it needs an operating system. How will you install the guest operating system?

Install from:

☐ Installer disc:

DVD RW Drive (D:)

☐ Installer disc image file (iso):

Browse...

☒ I will install the operating system later.

The virtual machine will be created with a blank hard disk.

Help < Back Next > Cancel

4) Select Operating System

The image shows a 'New Virtual Machine Wizard' window with a close button (X) in the top right corner. The title bar reads 'New Virtual Machine Wizard'. The main heading is 'Select a Guest Operating System', followed by the question 'Which operating system will be installed on this virtual machine?'. Below this, there are two sections: 'Guest operating system' and 'Version'. In the 'Guest operating system' section, there are three radio buttons: 'Microsoft Windows' (which is selected and has a dashed border), 'Linux', and 'Other'. In the 'Version' section, there is a dropdown menu currently showing 'Windows 10 x64'. At the bottom of the window, there are four buttons: 'Help', '< Back', 'Next >' (which is highlighted with a blue border), and 'Cancel'.

New Virtual Machine Wizard

Select a Guest Operating System
Which operating system will be installed on this virtual machine?

Guest operating system

☒ Microsoft Windows
☐ Linux
☐ Other

Version

Windows 10 x64

6) Set Hard Disk capacity

The screenshot shows a Windows-style dialog box titled "New Virtual Machine Wizard" with a close button (X) in the top right corner. The main heading is "Specify Disk Capacity" followed by the question "How large do you want this disk to be?". Below this, a paragraph explains: "The virtual machine's hard disk is stored as one or more files on the host computer's physical disk. These file(s) start small and become larger as you add applications, files, and data to your virtual machine." A label "Maximum disk size (GB):" is followed by a text box containing "60.0" and a spinner control. Below that, it says "Recommended size for Windows 10 x64: 60 GB". There are two radio button options: "Store virtual disk as a single file" (which is selected) and "Split virtual disk into multiple files". A note under the second option states: "Splitting the disk makes it easier to move the virtual machine to another computer but may reduce performance with very large disks." At the bottom, there are four buttons: "Help", "< Back", "Next >" (highlighted with a blue border), and "Cancel".

New Virtual Machine Wizard

Specify Disk Capacity
How large do you want this disk to be?

The virtual machine's hard disk is stored as one or more files on the host computer's physical disk. These file(s) start small and become larger as you add applications, files, and data to your virtual machine.

Maximum disk size (GB): 60.0

Recommended size for Windows 10 x64: 60 GB

☒ Store virtual disk as a single file

☐ Split virtual disk into multiple files

Splitting the disk makes it easier to move the virtual machine to another computer but may reduce performance with very large disks.

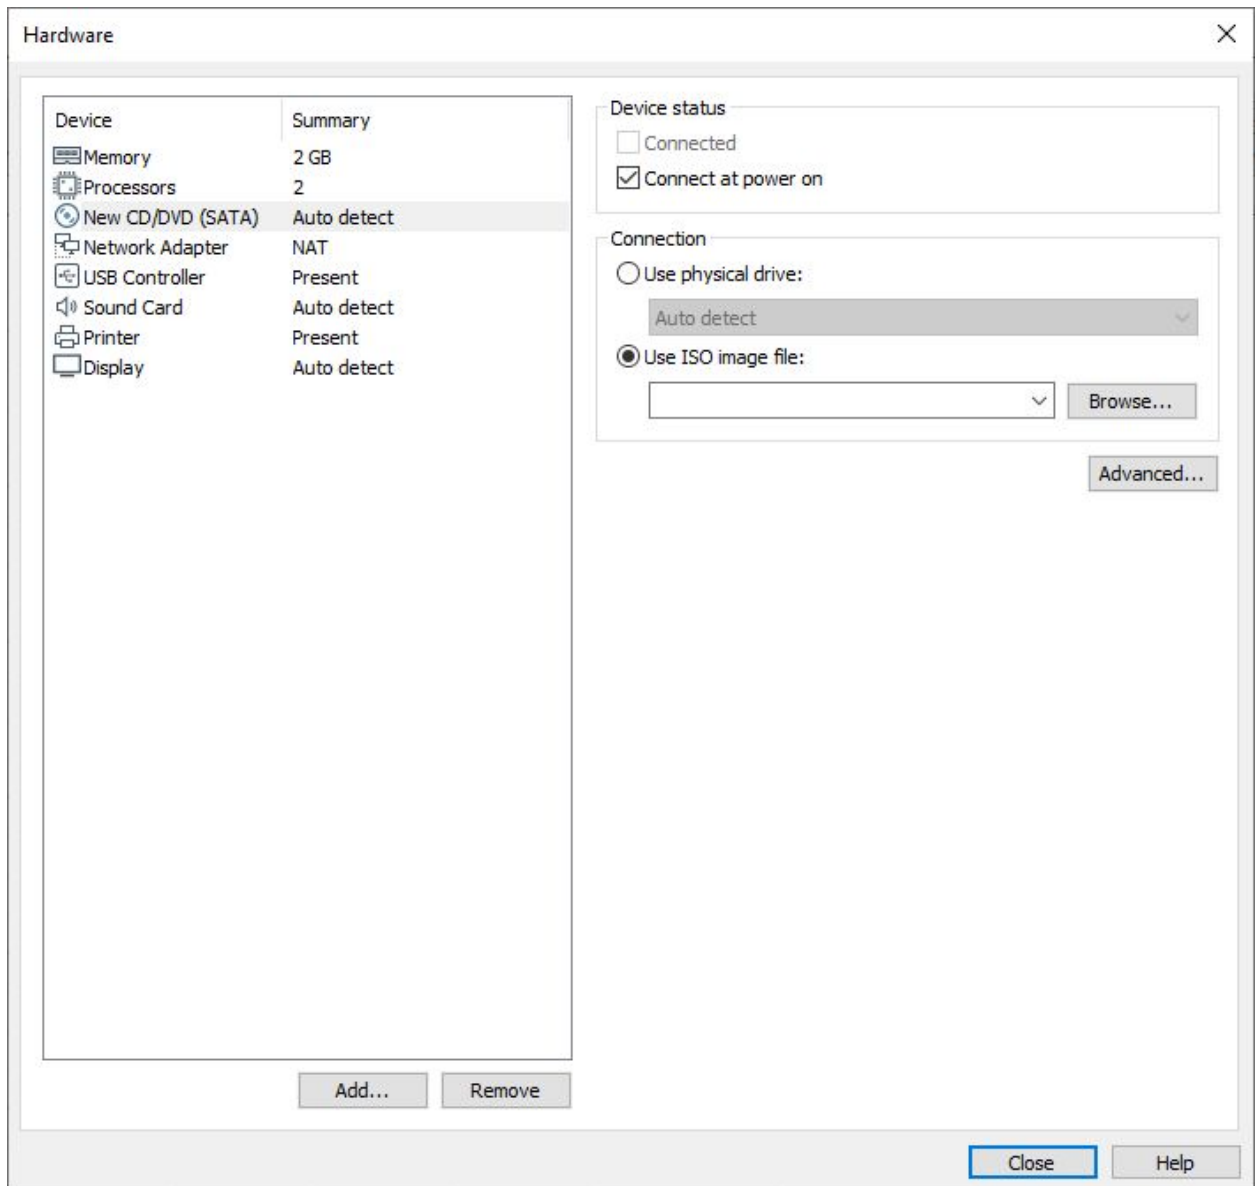

Help < Back Next > Cancel

Note: if your HDD is using FAT32 as a file format set the disk to use "Split virtual disk into multiple files" If HDD is using NTFS (Windows Proprietary) set disk to use "Store virtual disk as a single file"

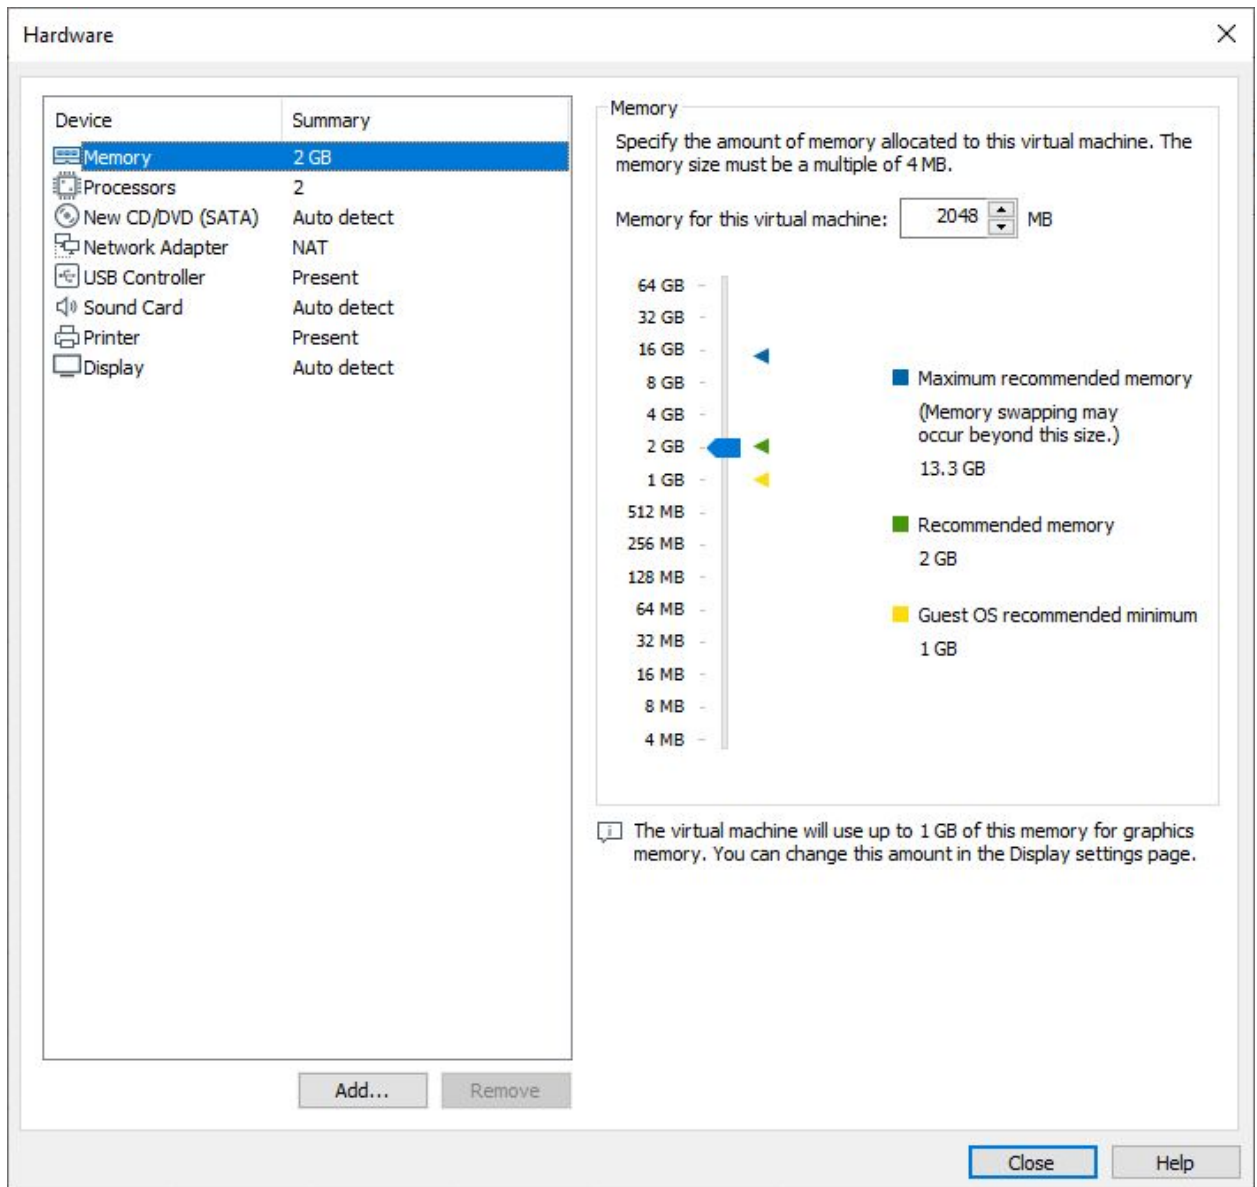

7) Click Customize Hardware

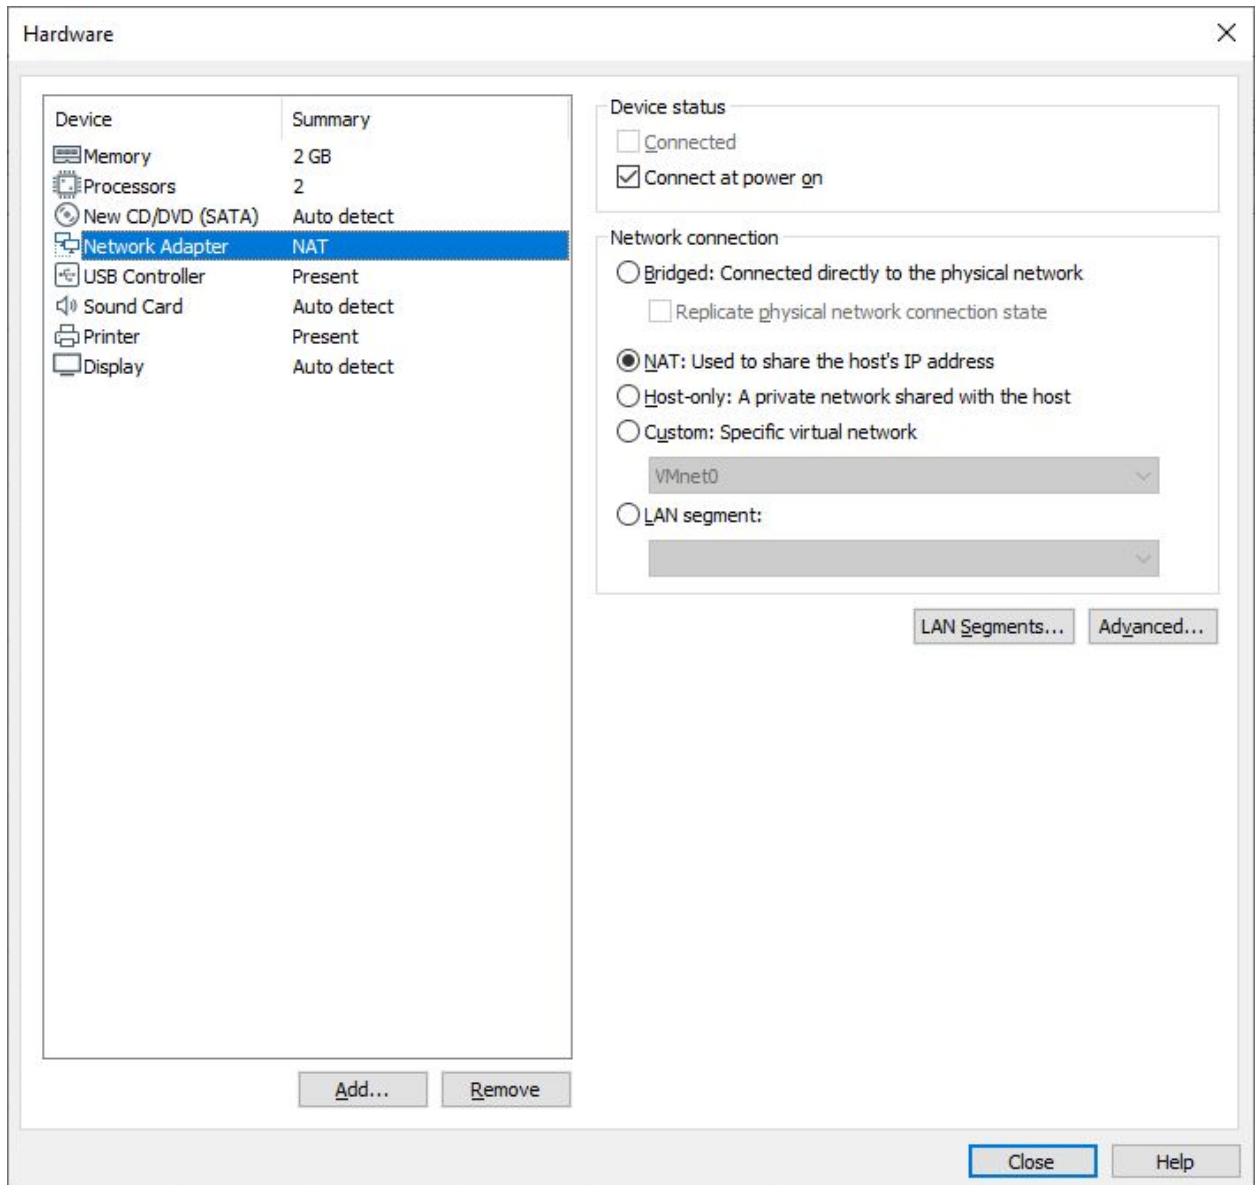

- 8) Click New CD/DVD (SATA) and set the connection to use ISO file. Browse for the ISO file of the operating system

9) Adjust the memory if needed

10) Adjust network settings as needed

Notes: Bridged networking uses the physical network connection. Host-only connects the Virtual Machine to the host. Custom: Specific virtual network specifies what internal network to use

11) Click finished when you are satisfied with Virtual Machine settings

Note : If you need to further adjust the virtual machine in Player click Player > Manage > Virtual Machine Settings (to add HDDs, enable Virtualization Technology (Intel VT-x) etc. If you need to further adjust the virtual machine in Pro click VM > Settings (or press Ctrl D on your keyboard)

12) Press  when ready to install Operating System. Follow the instructions provided by the installation process
