

How To Create a Windows Deployment Server with Microsoft Deployment Tools

By Justin Mah

Requirements

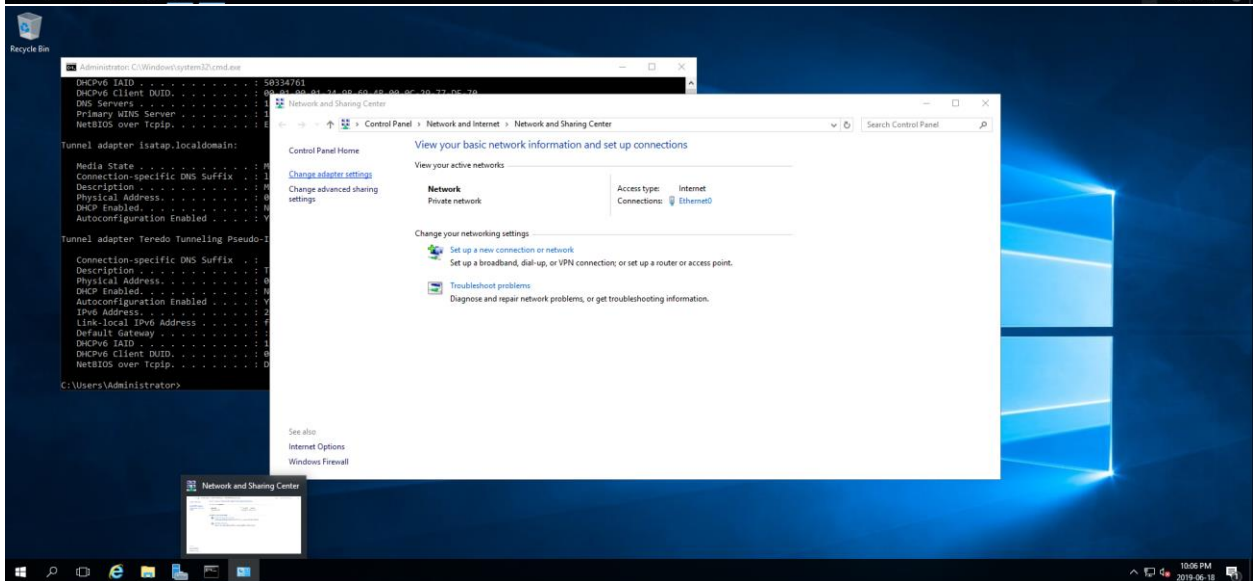

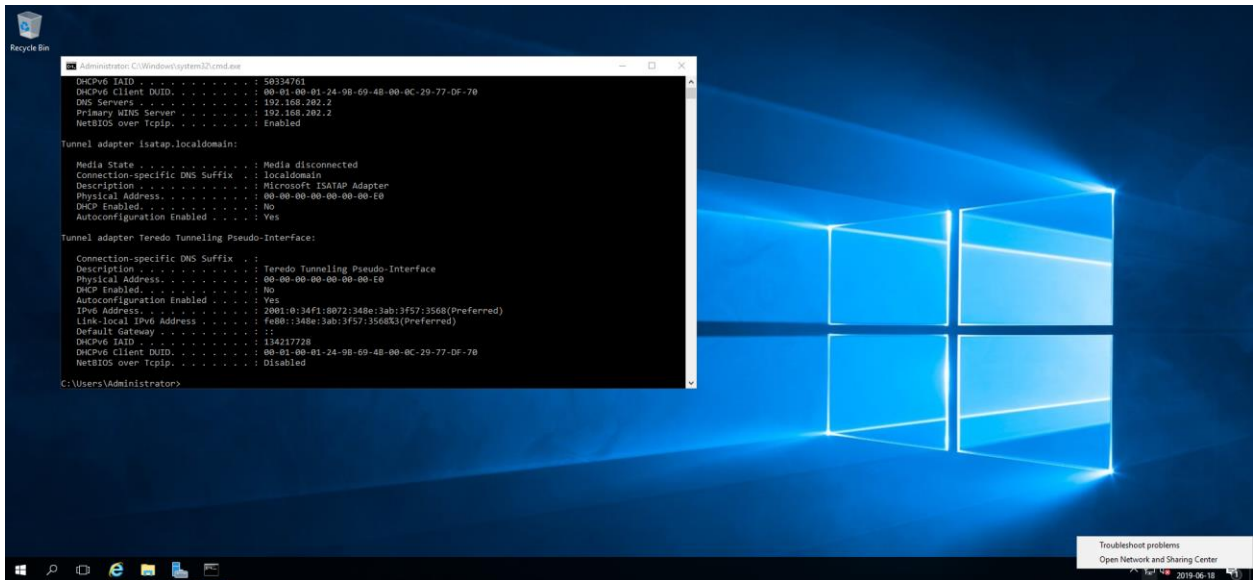

- A Domain Controller (if you have not created one please refer to the tutorial “How to Create a Windows Server 2016 Domain Controller”)
- A copy of a Windows Operating System ISO
- Windows 10 Automated Deployment Toolkit and WinPE add-on
- Microsoft Deployment Services

Steps

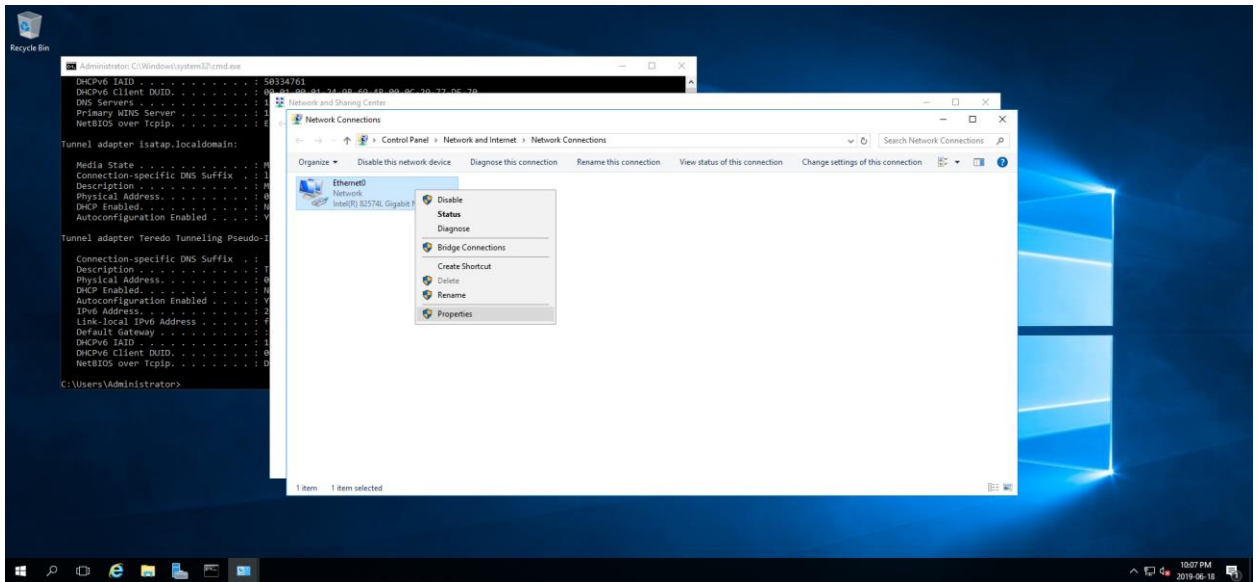

- 1) Create a virtual machine with the same specifications as you Domain Controller, install Windows Server 2016
- 2) Open the Command Prompt (Windows Key + R > cmd) type the command ipconfig

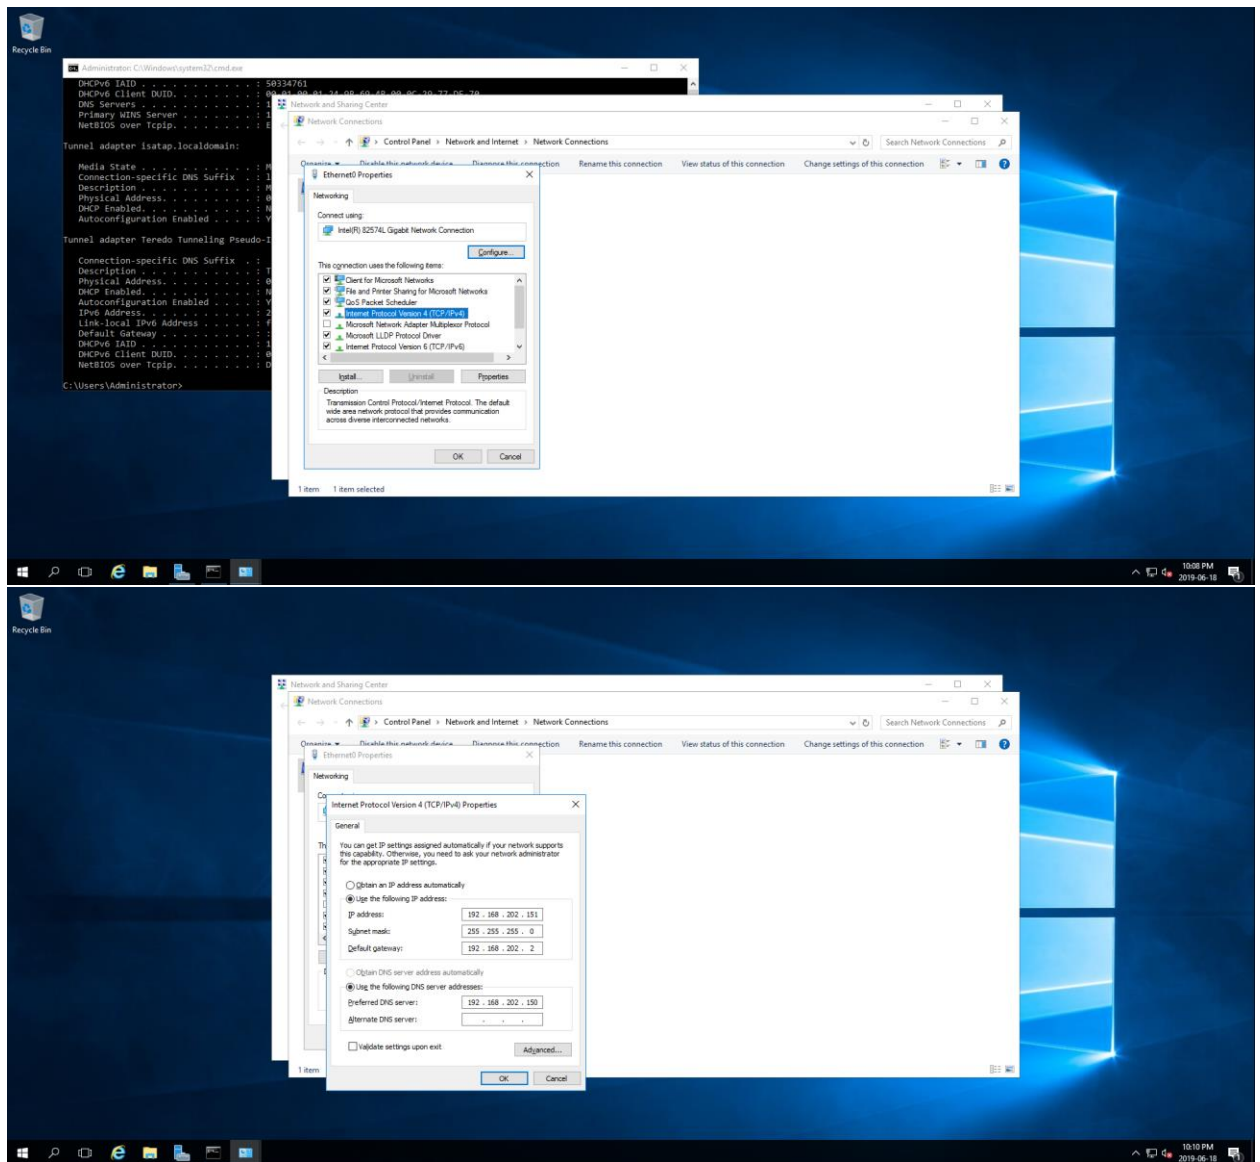

- 3) Right click the network adapter icon > Network and Sharing Centre > Click "Change Adapter Settings"

- 4) Right click the network adapter “Ethernet0” > Properties

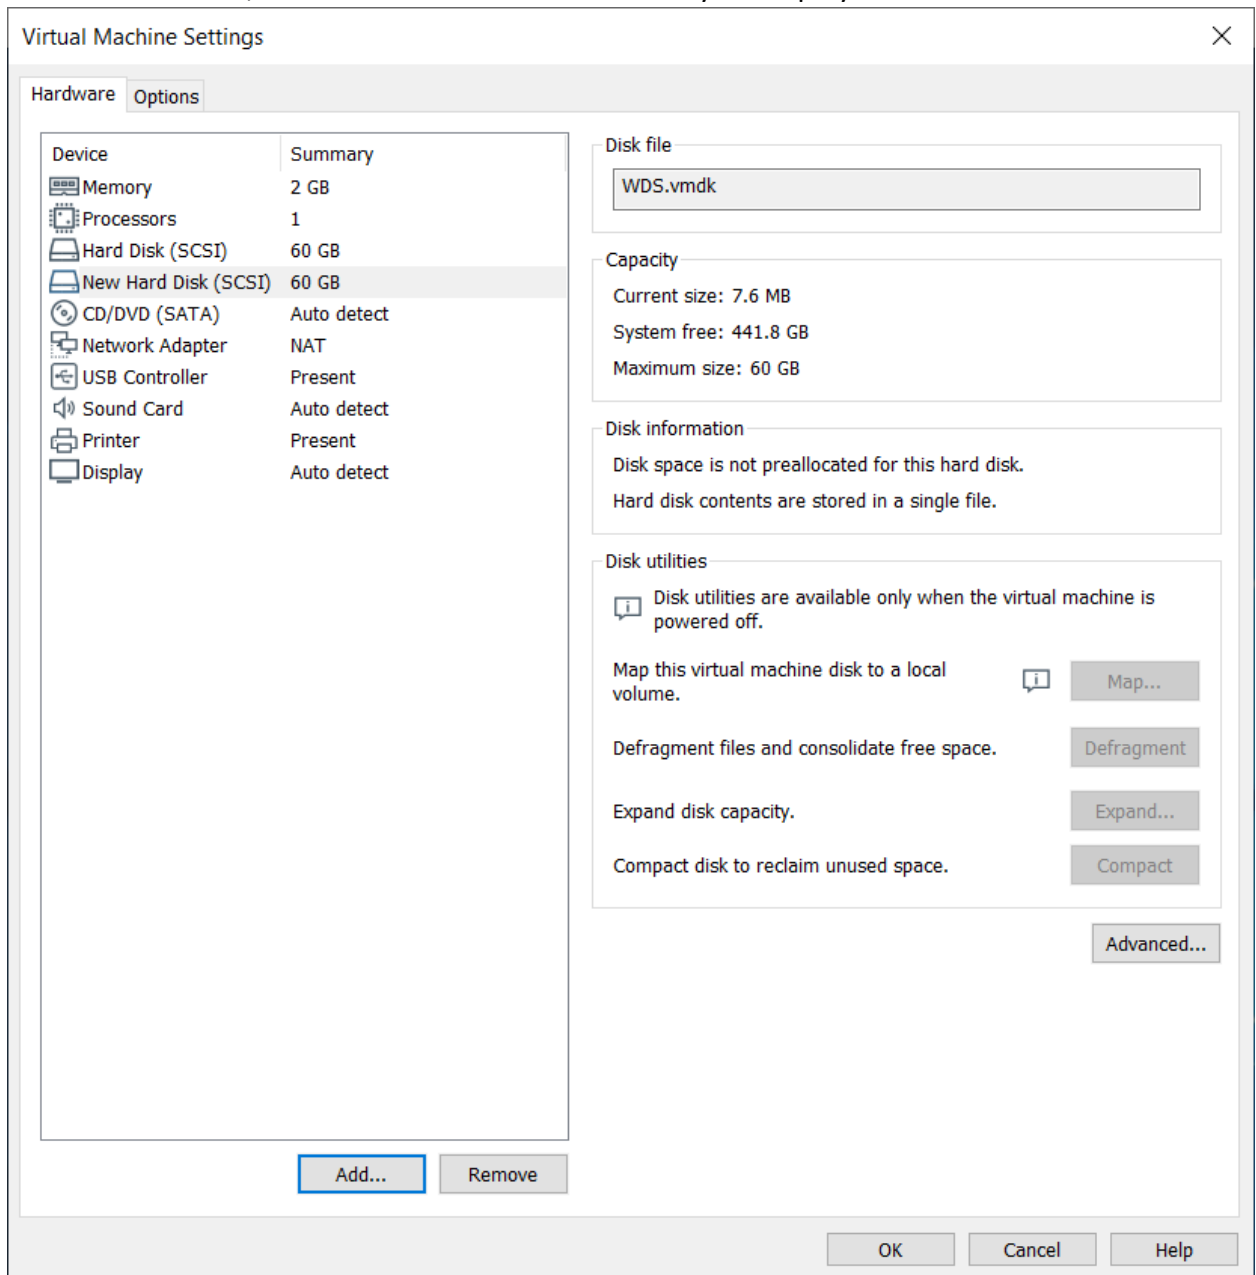

- 5) Select Internet Protocol Version 4 > Set the IP address, Subnet Mask, and Default Gateway to the network configuration outlined in step 2, set the Primary DNS Server to the IP Address of your Domain Controller

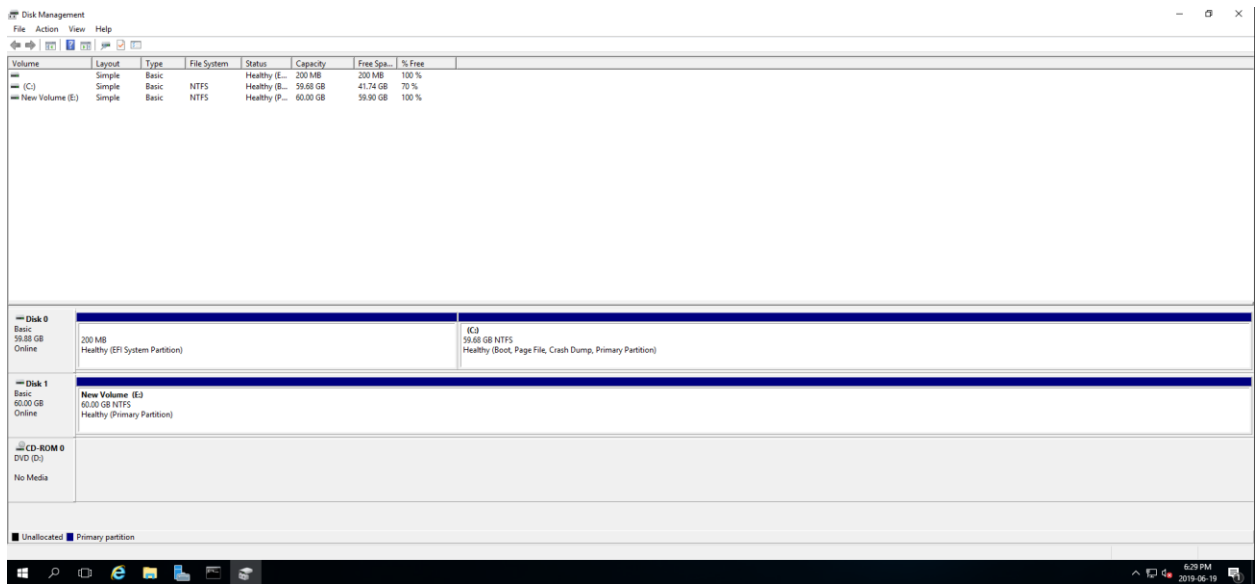

6) Download and install Windows 10 ADK and MDT, accept the defaults.

7) Add a second HDD, which will store the files necessary for deployment

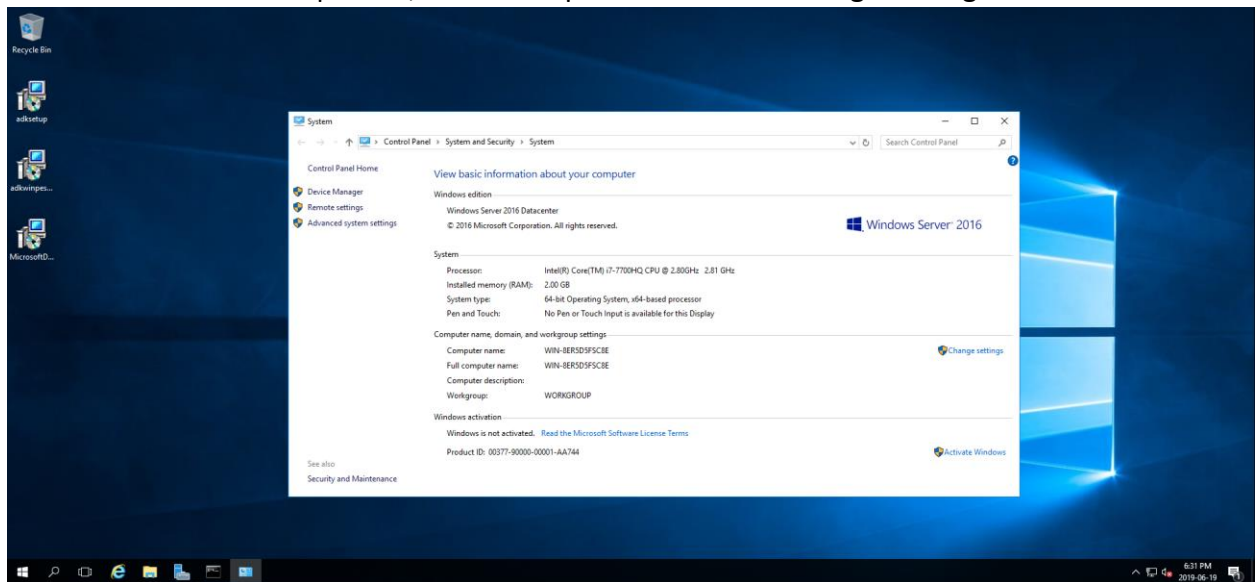

note: Before formatting the drive as a new simple volume you need to bring it online

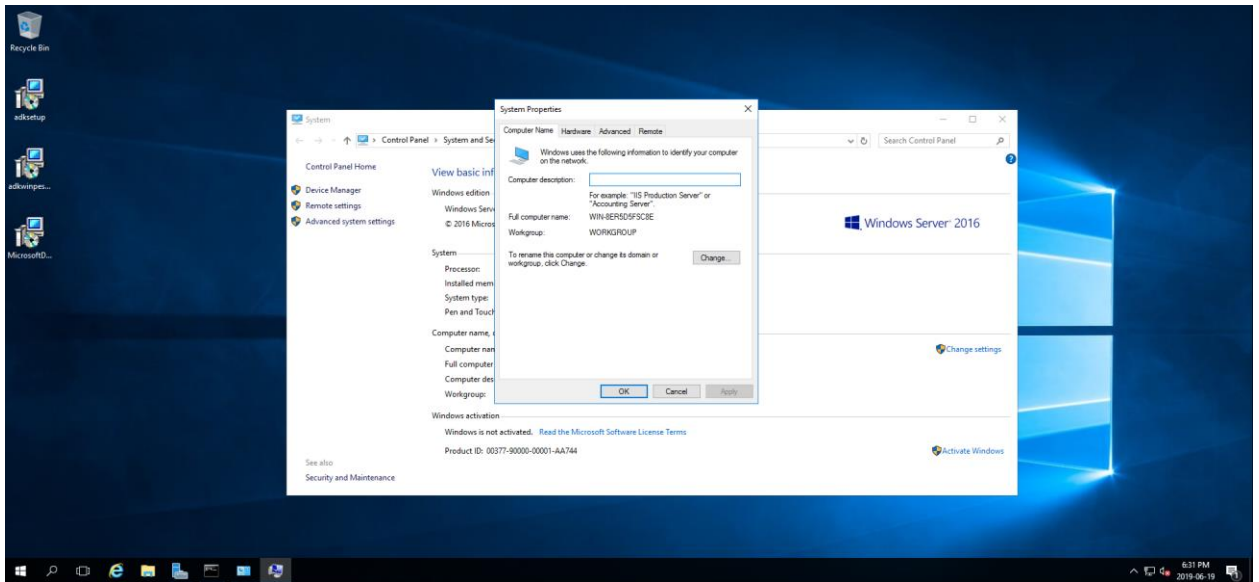

then initialize it as an MBR first

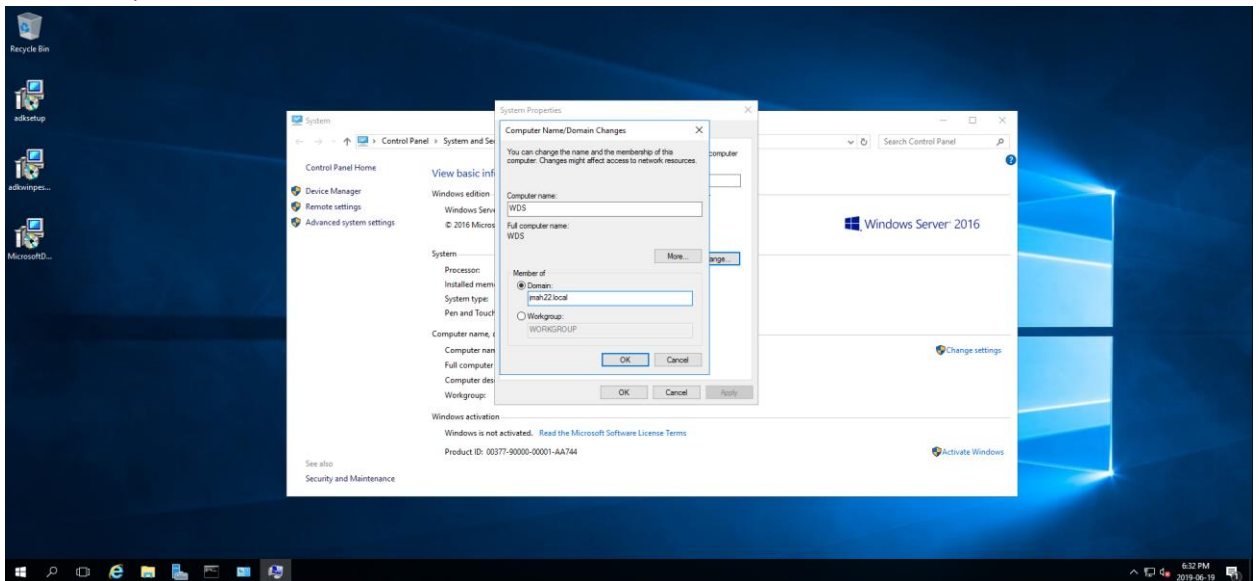

8) Push Windows + Pause | Break, under computer name click change settings

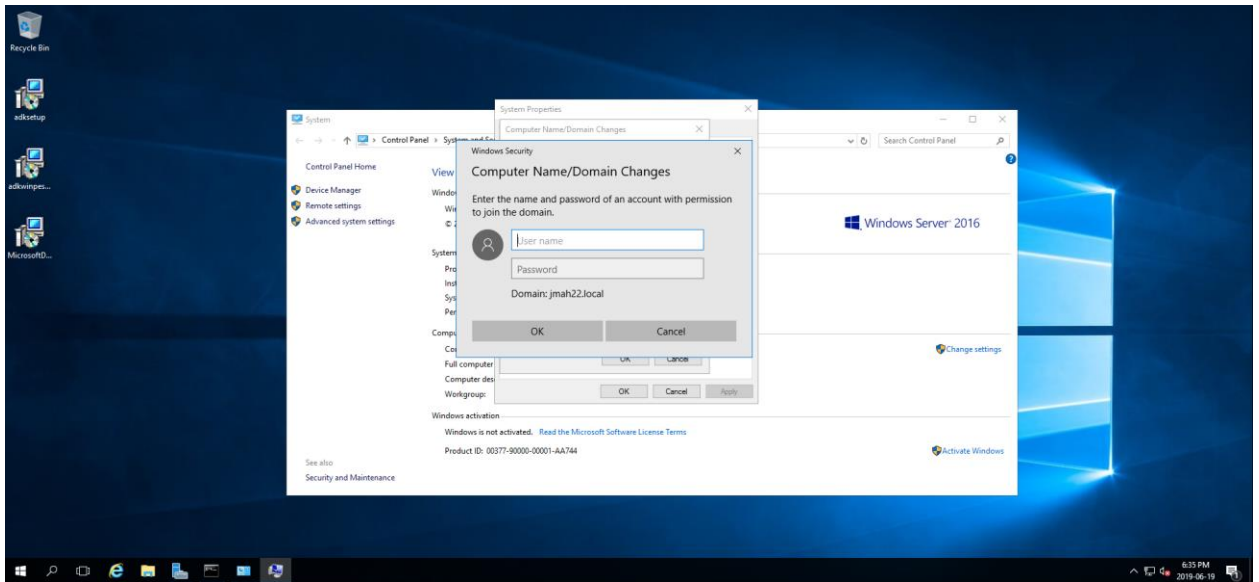

9) Click change

10) Select domain and enter your domain name (As created in How to create a domain controller)

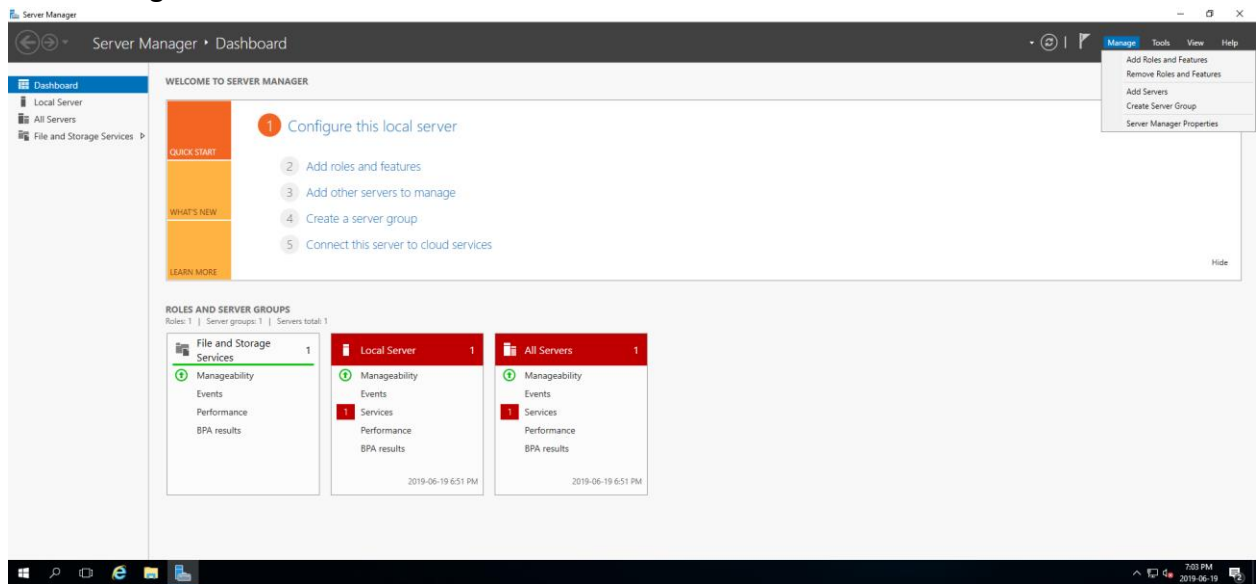

11) Enter the Domain Administrator username and password

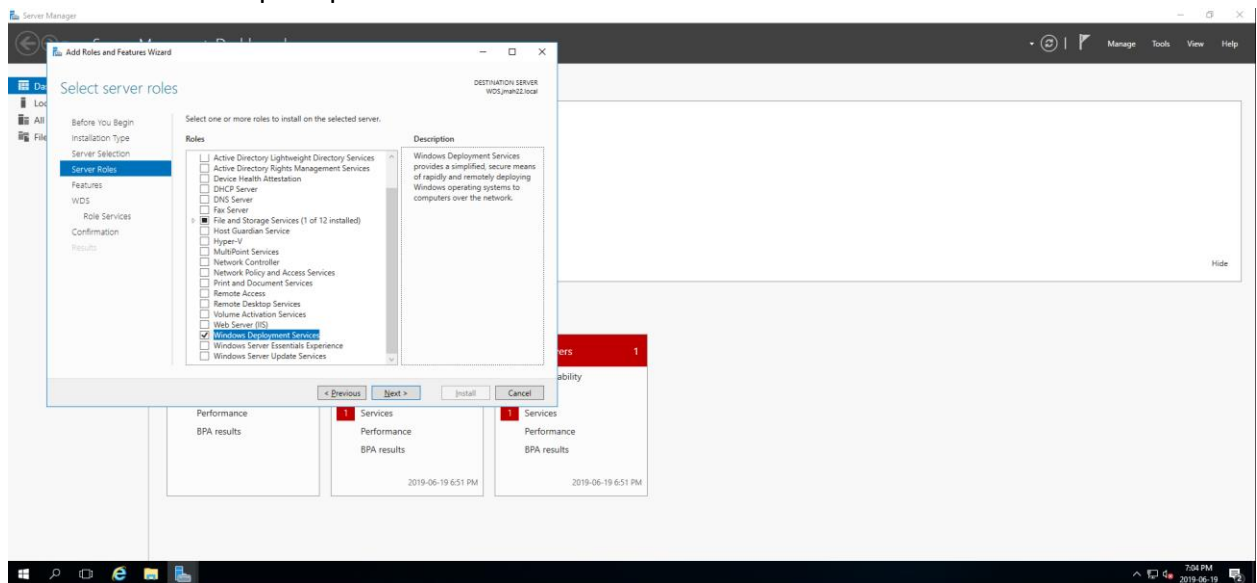

12) Login using the Domain Administrator account

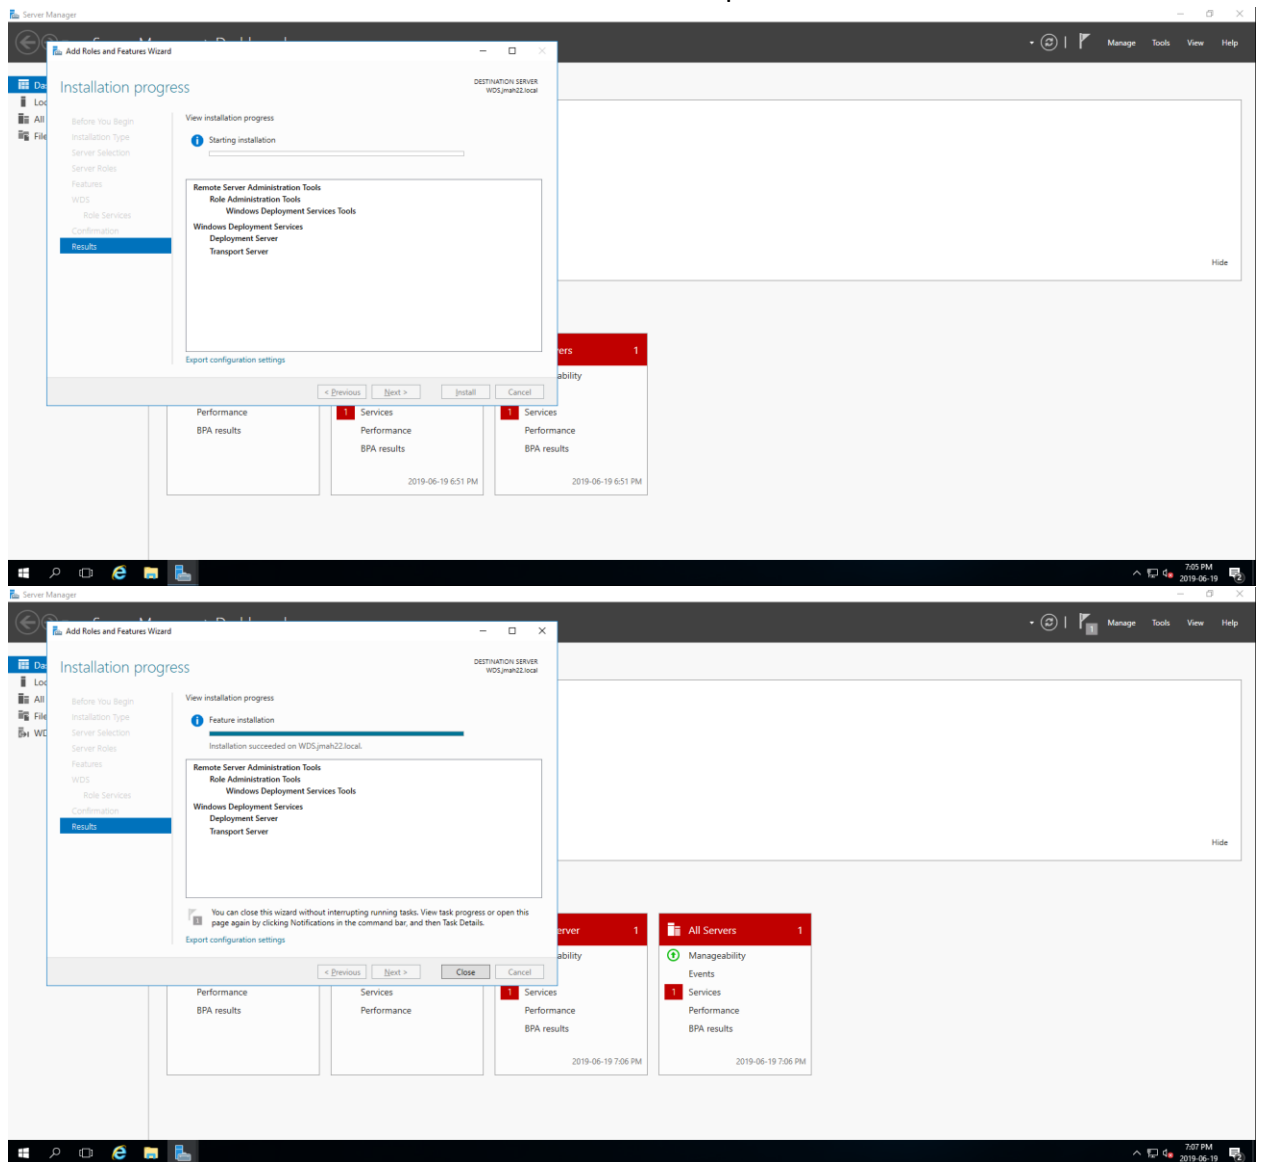

13) Click Manage > Add Roles and Features

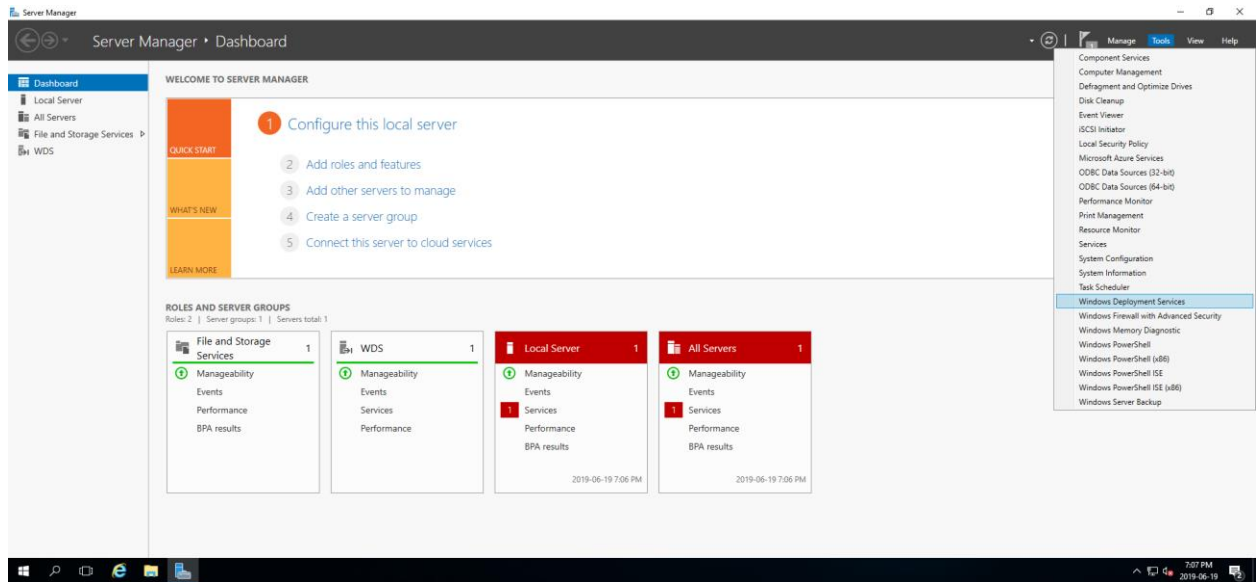

14) Accept defaults > Select Windows Deployment Services at the server roles page > Click add features when prompted

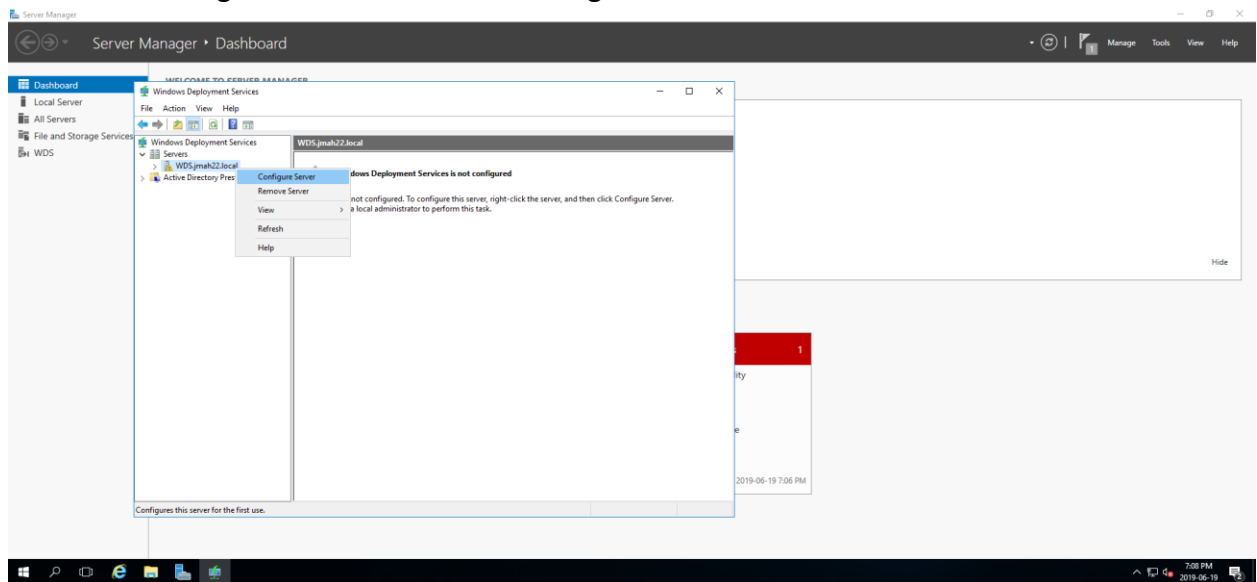

15) Click next 3 times > click install > click closed when completed

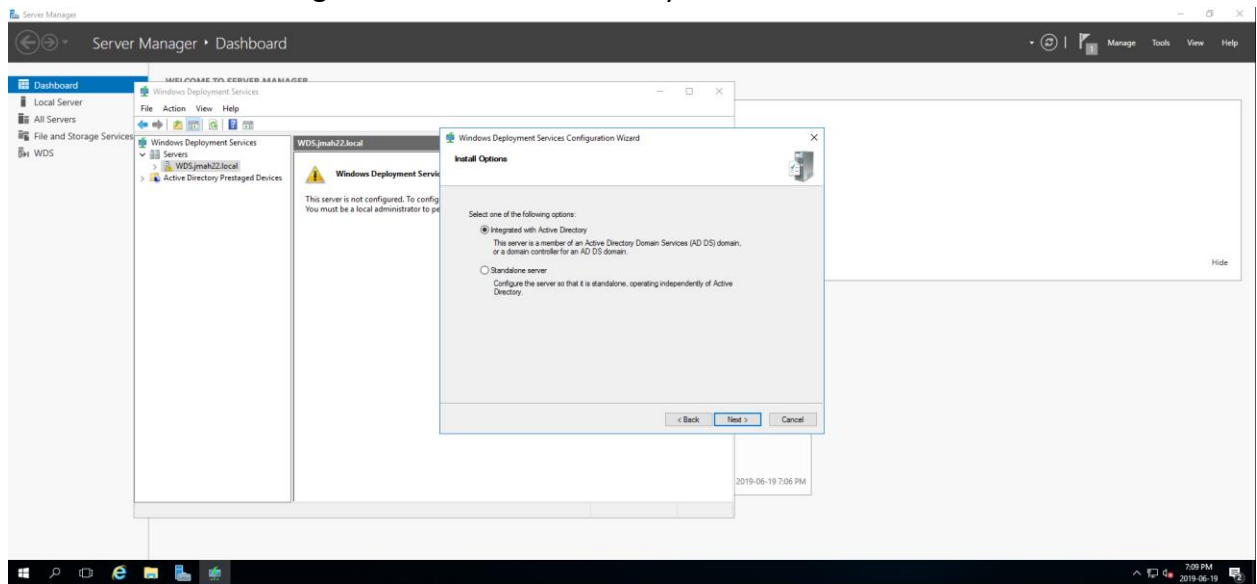

16) Click tools > Windows Deployment Services

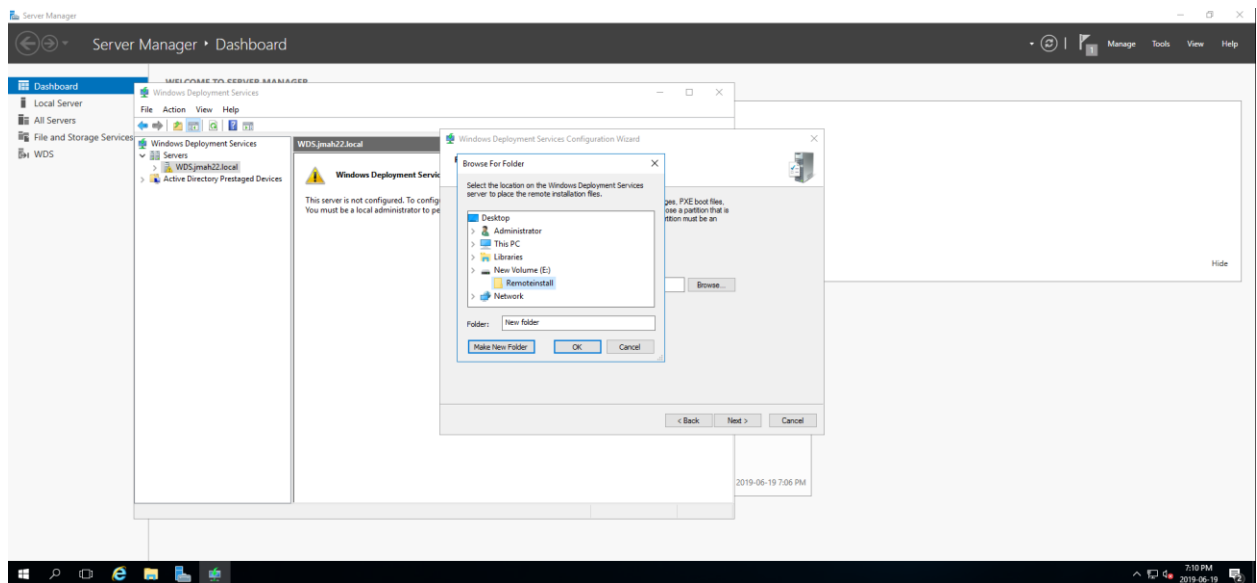

17) Click servers > right-click *server name* > configure server

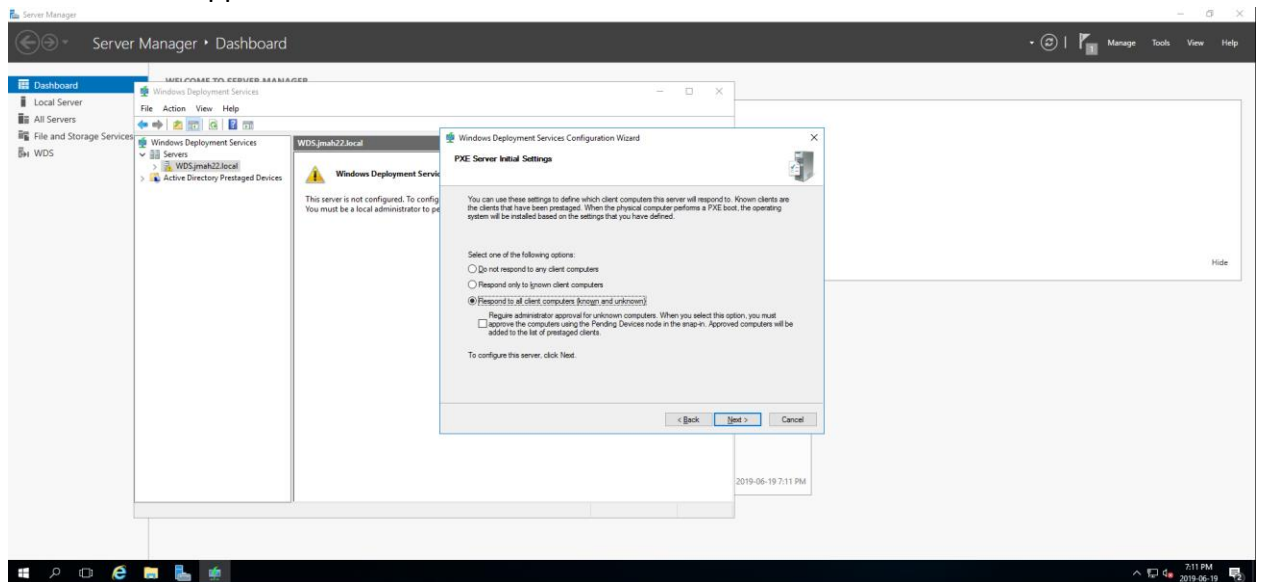

18) Click next > Select “Integrated with Active Directory”

19) Click browse > select the second drive created in step 7 and create a folder to store the remote installation folder

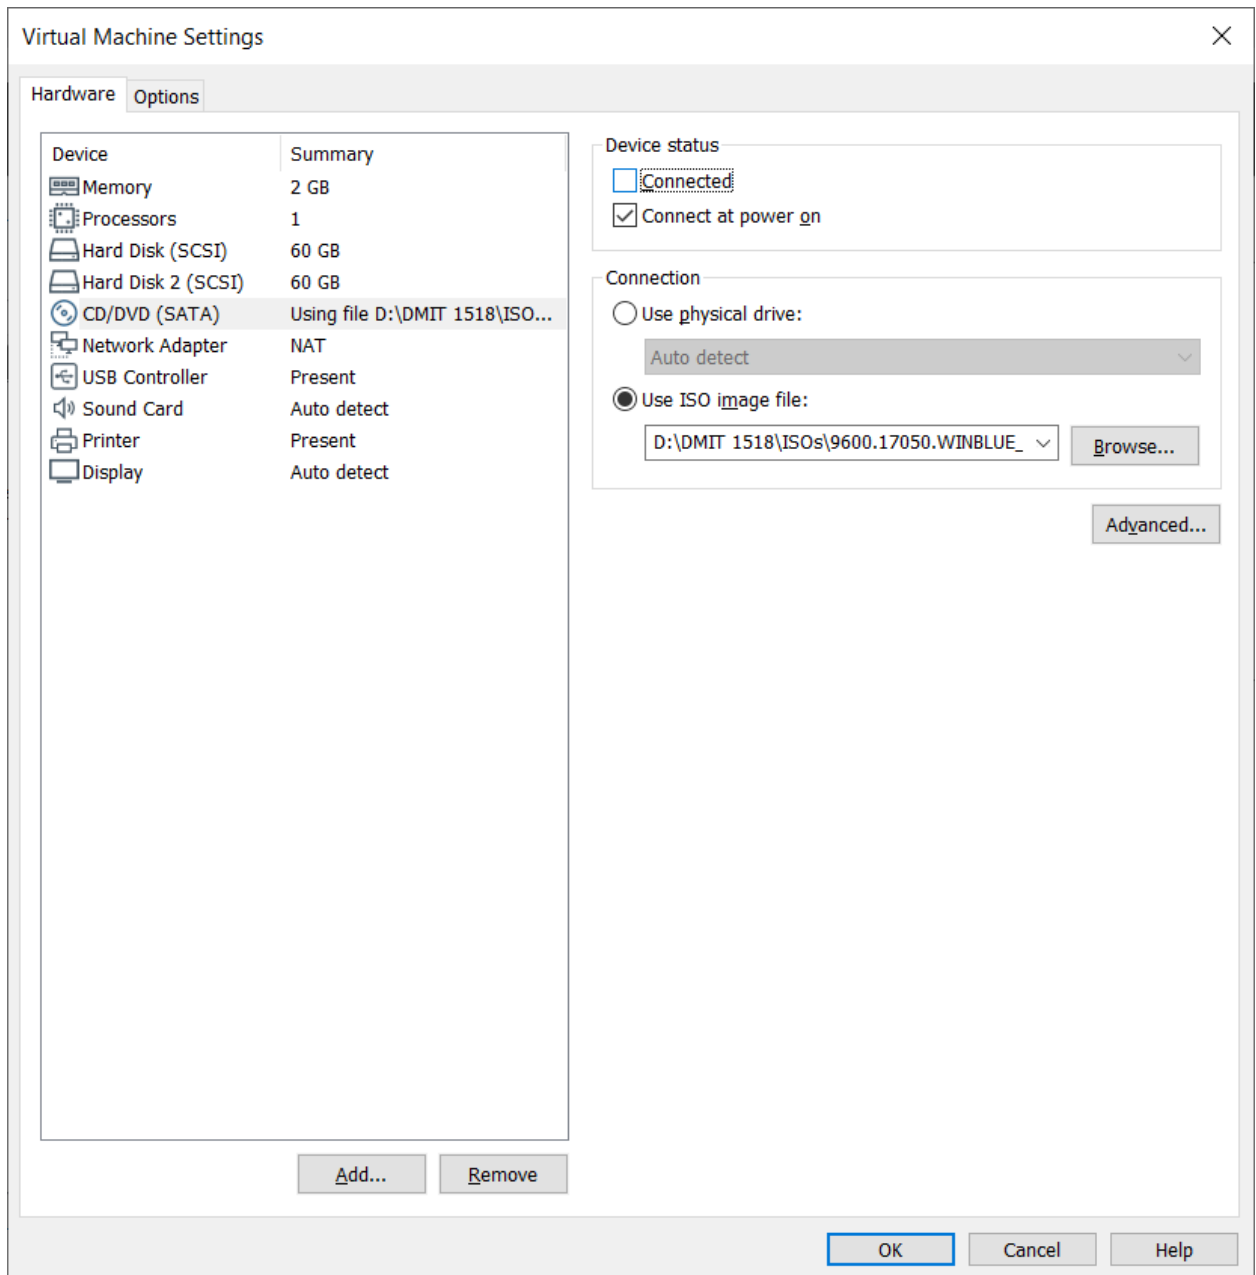

20) Select “Respond to all client computers (known and unknown)” . Leave Require administrator approval box unchecked

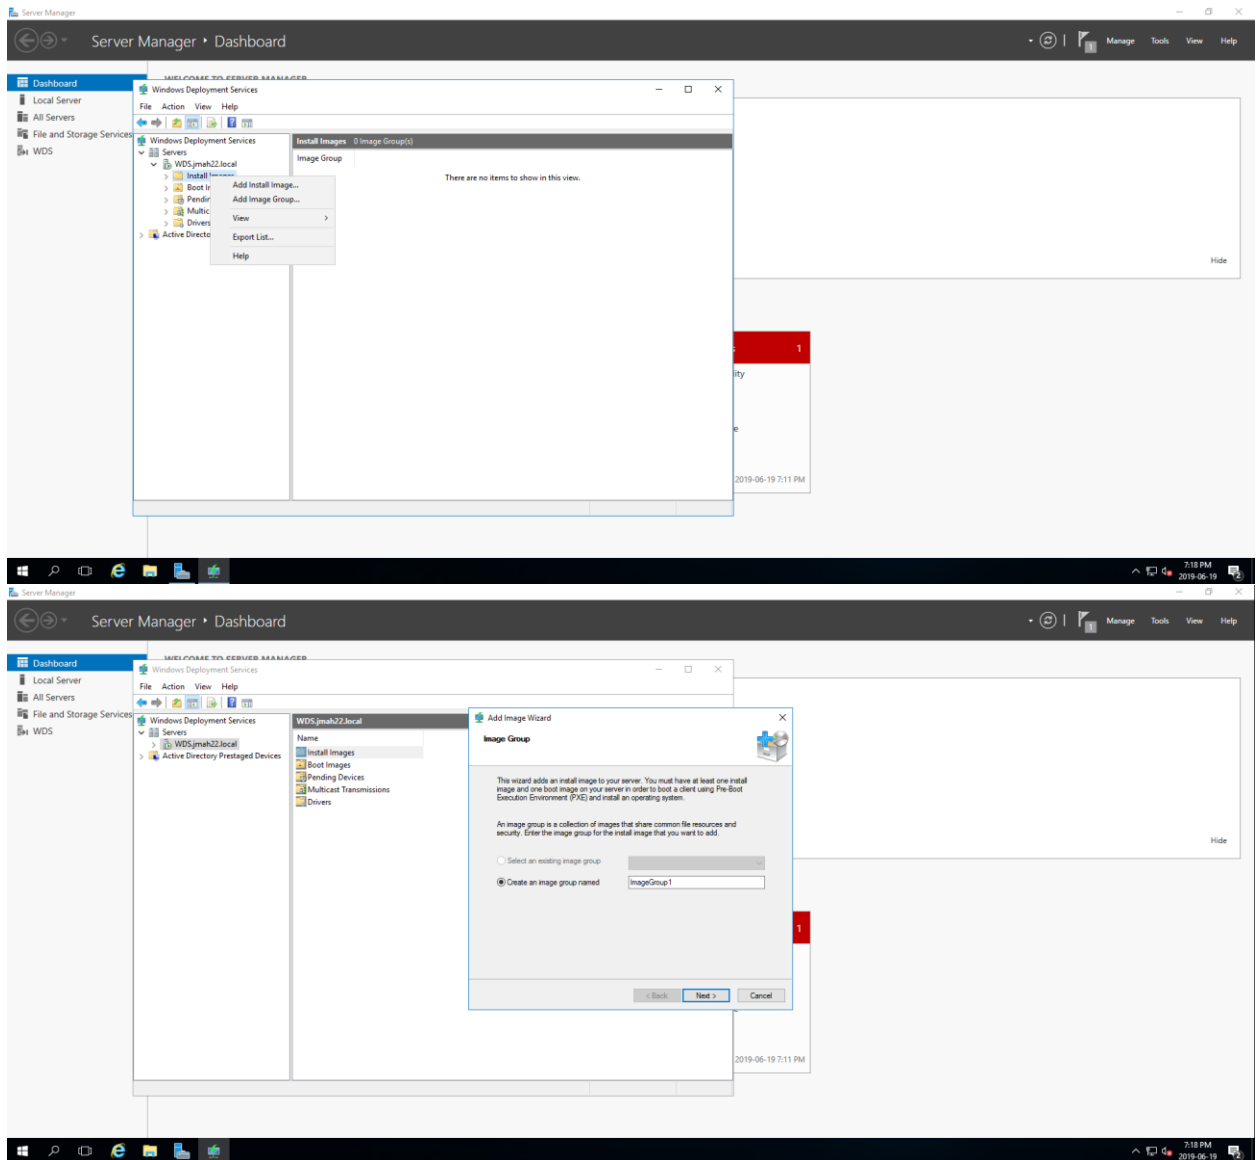

21) Click finish when prompted

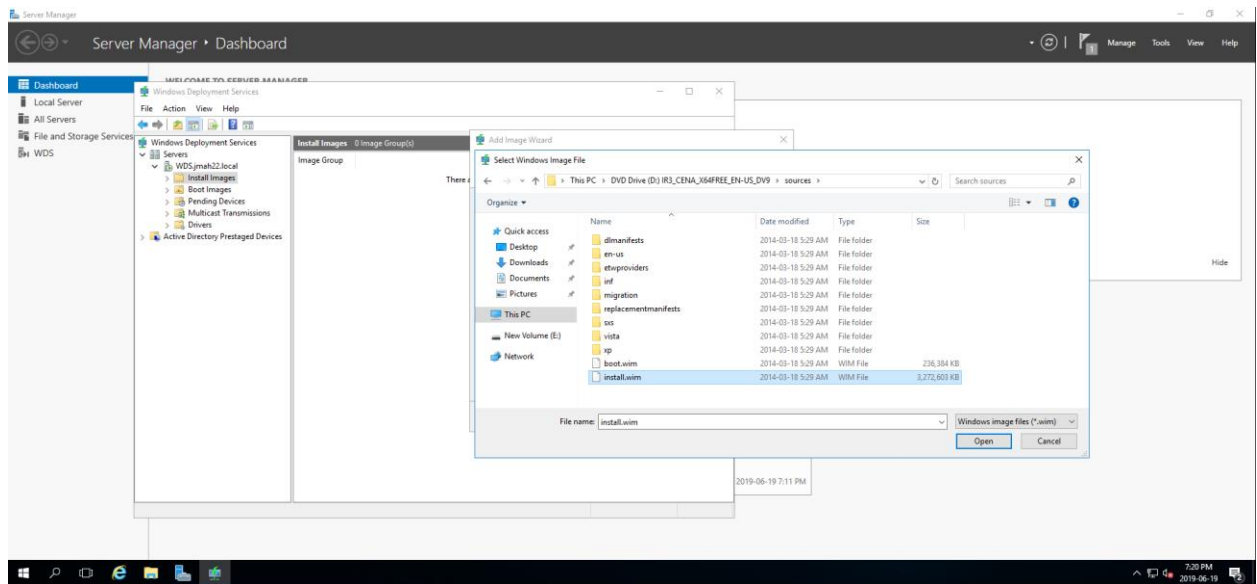

22) Attach the installation ISO to your VM

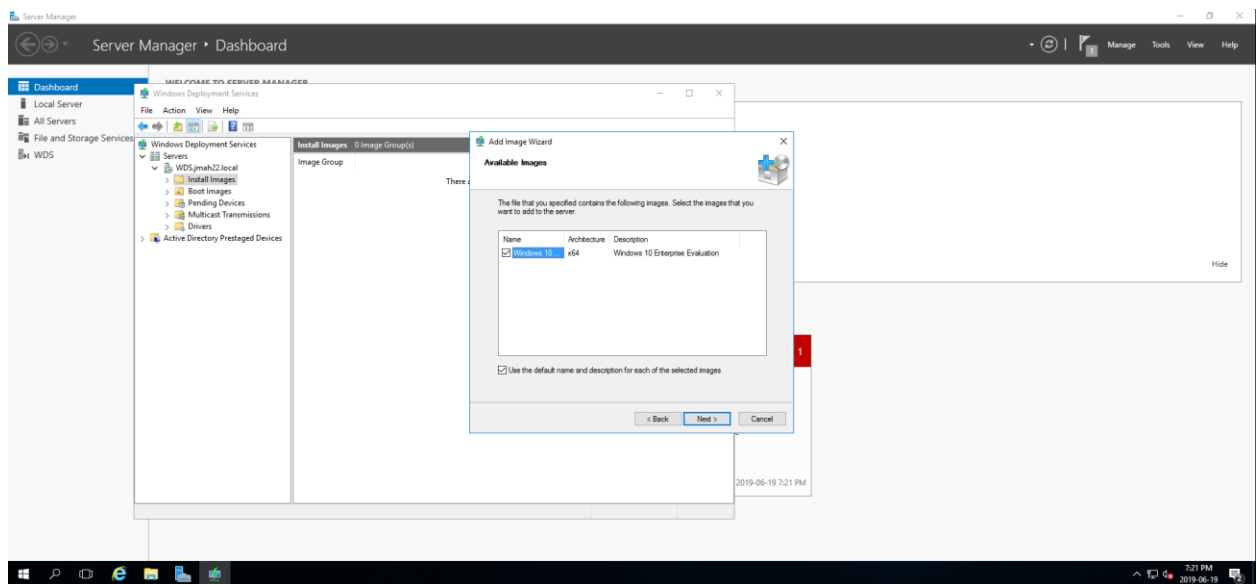

23) Right click install images > Add install image > Name image group

24) Click browse > locate the install.wim file located in the sources folder

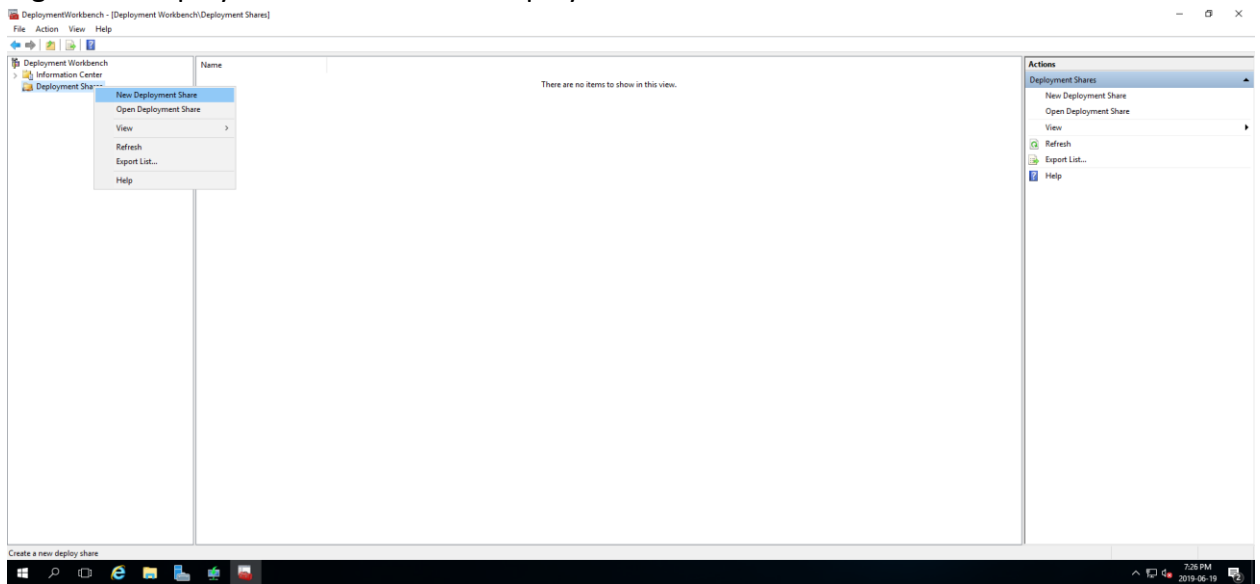

25) Click next 2 times > click finish

26) Open deployment workbench (under deployment toolkit in the start menu)

27) Right click deployment shares > New Deployment Share

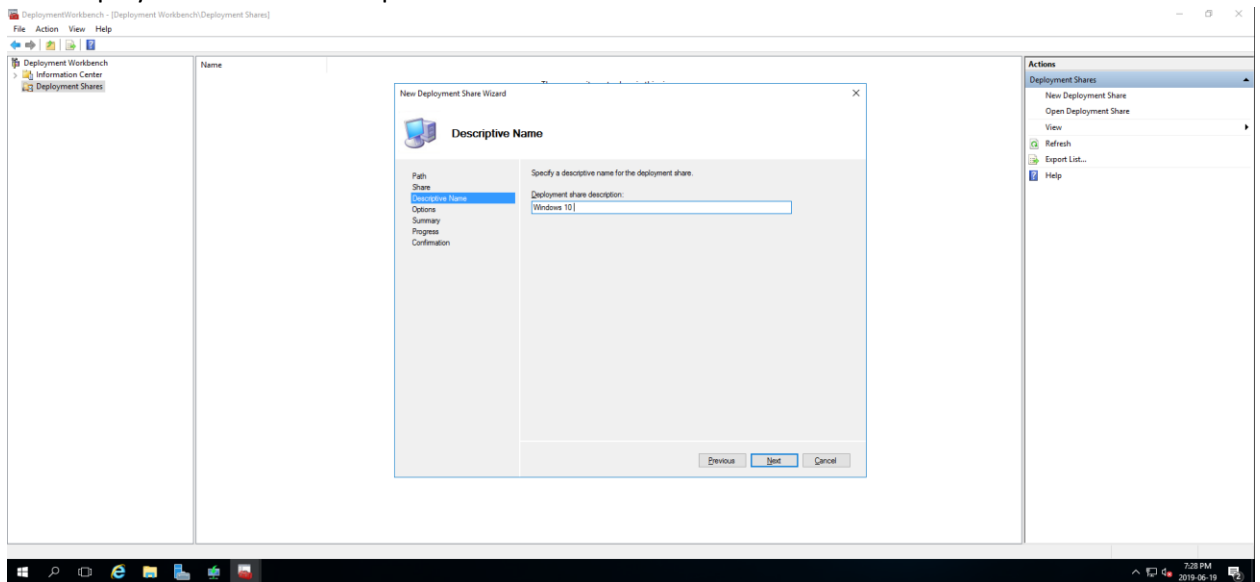

28) Point the deployment share path to the second hard drive

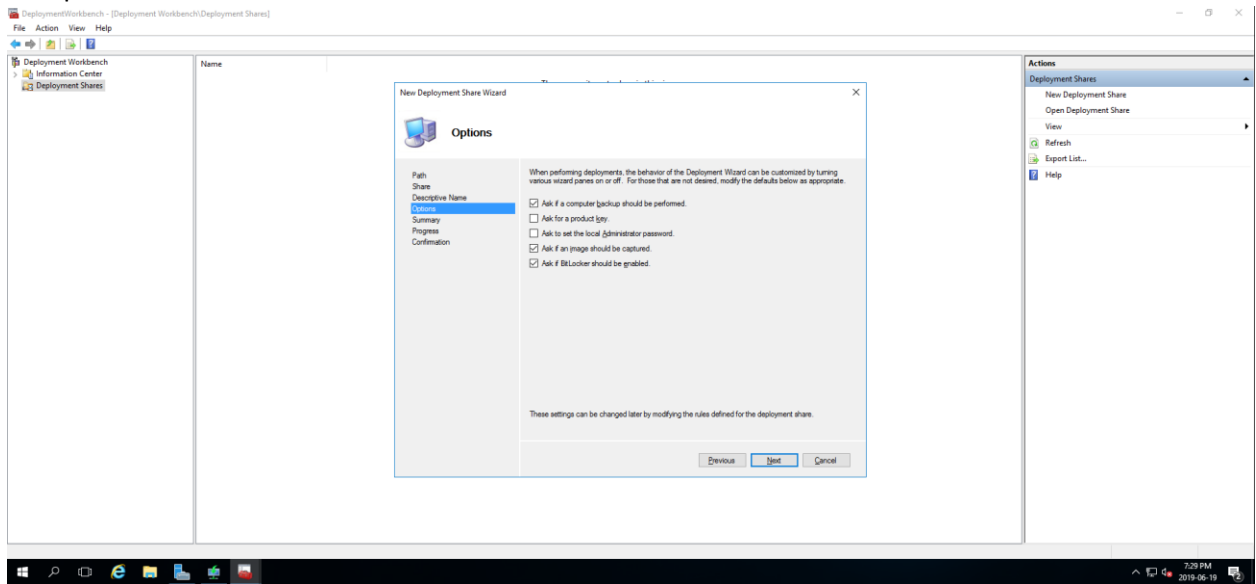

29) Accept default UNC name

30) Give deployment share a descriptive name

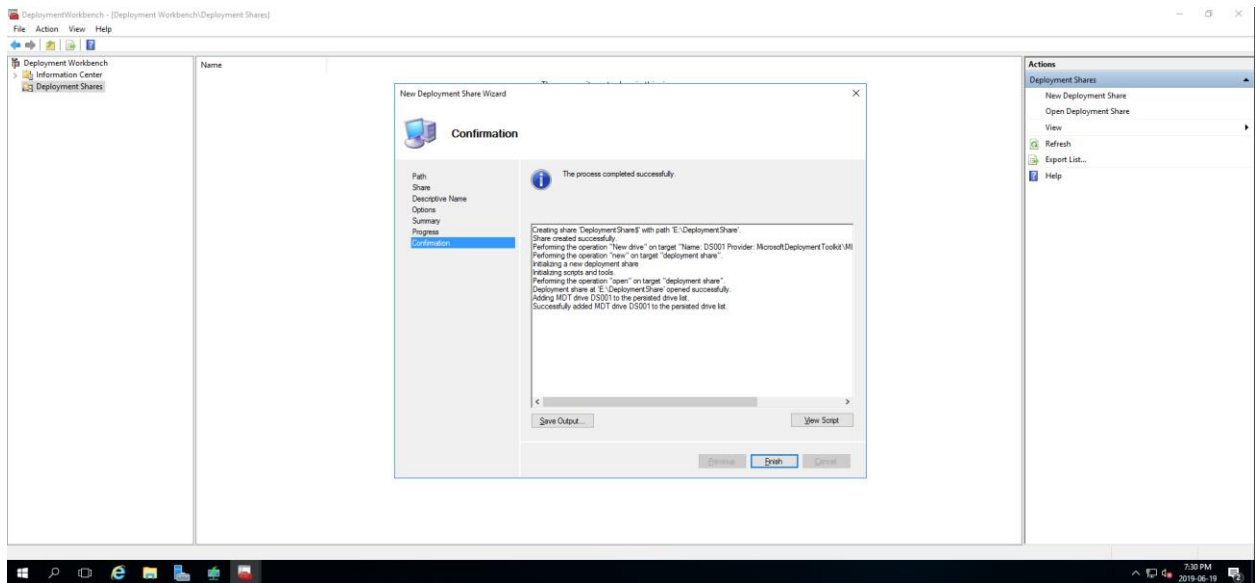

31) Accept defaults

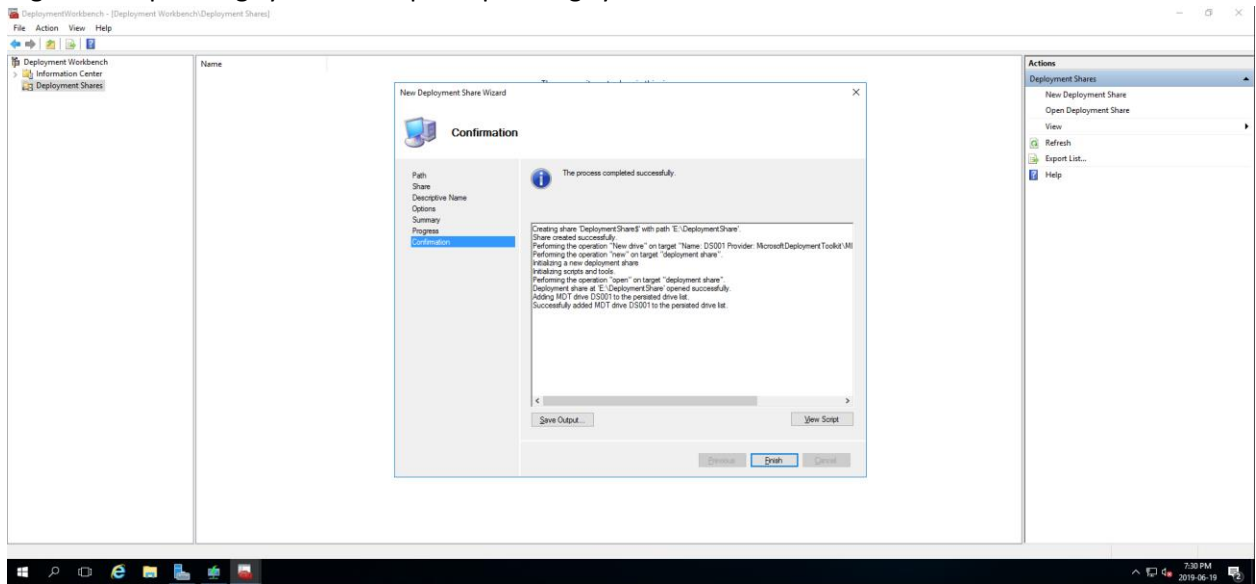

32) Click next 2 times

33) Click finish

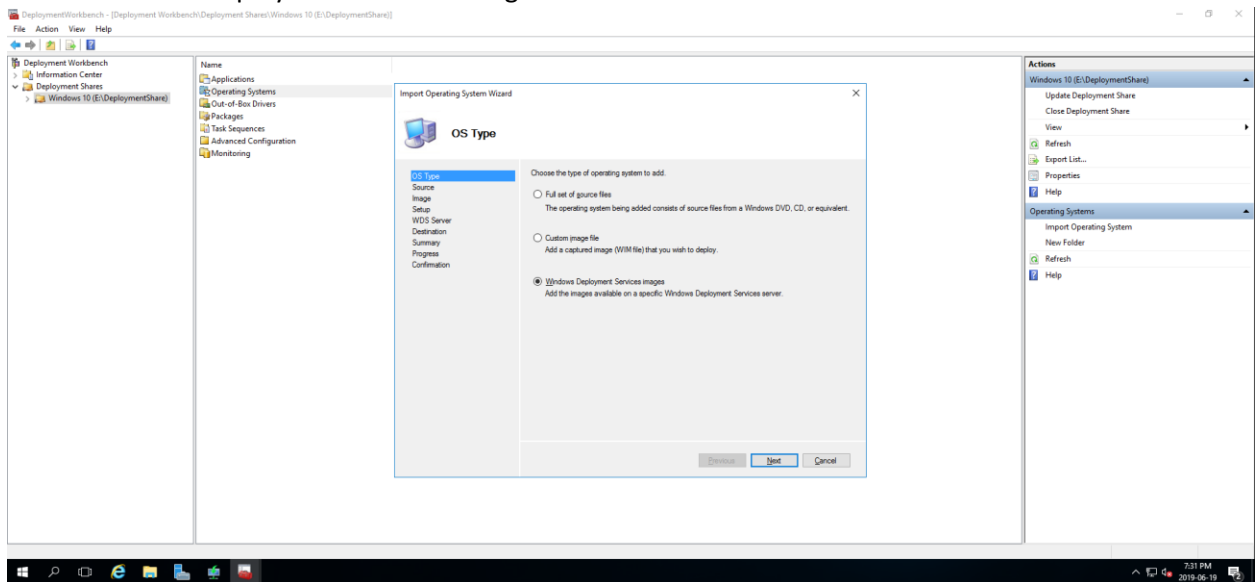

34) Open deployment share

35) Right click operating systems > import operating system

36) Select Windows Deployment Services images

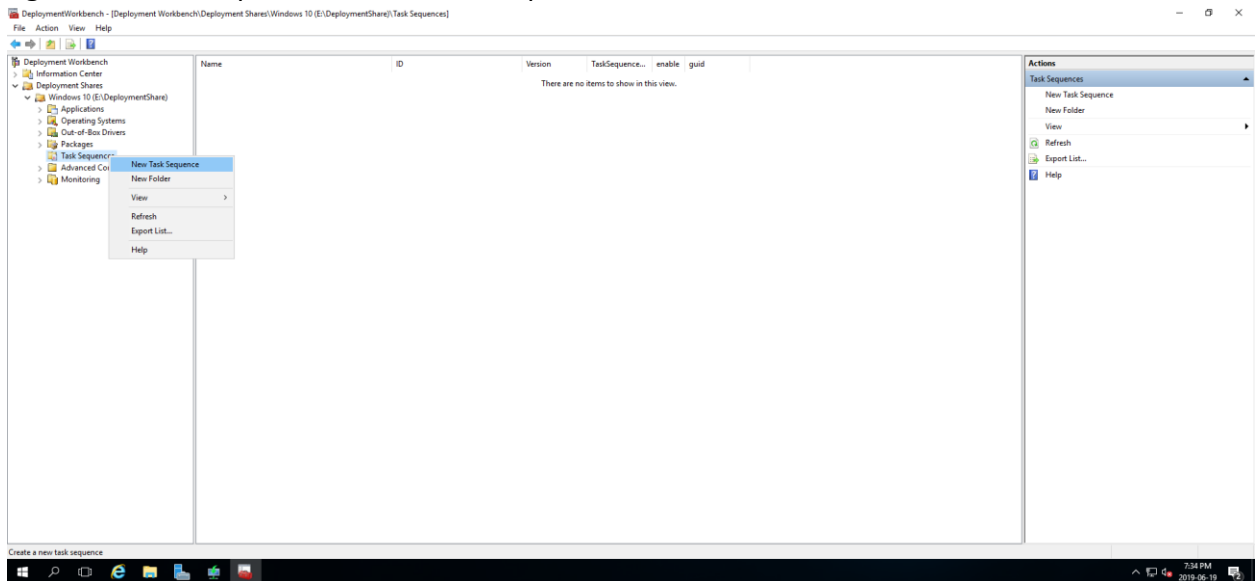

37) Enter deployment server name

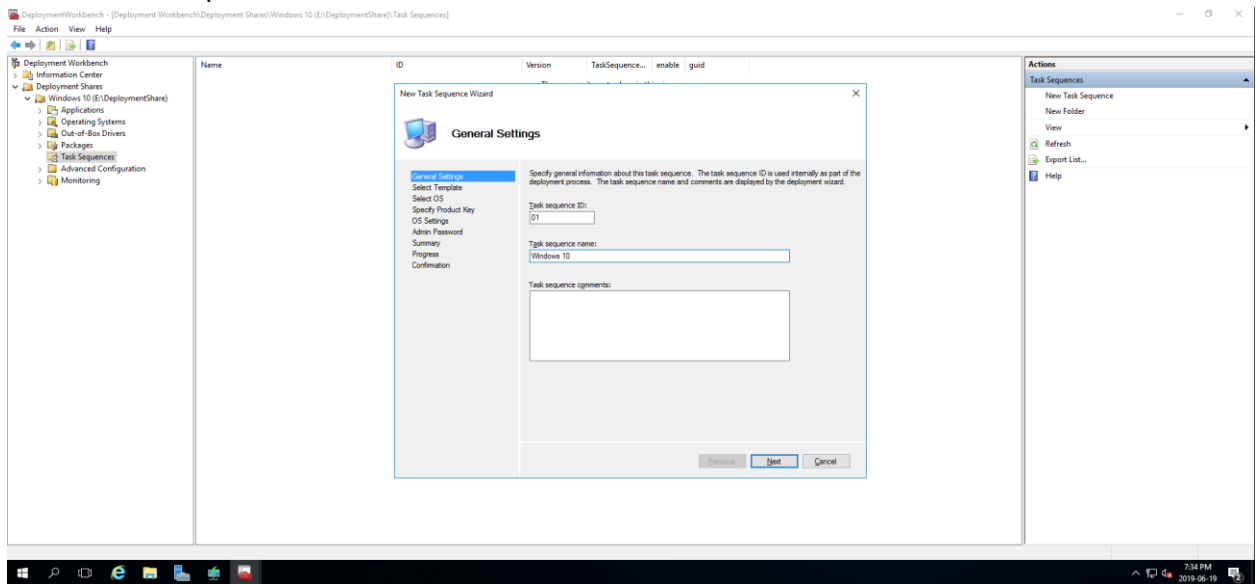

38) click next 2 times > click finish

39) right click task sequences > new task sequence

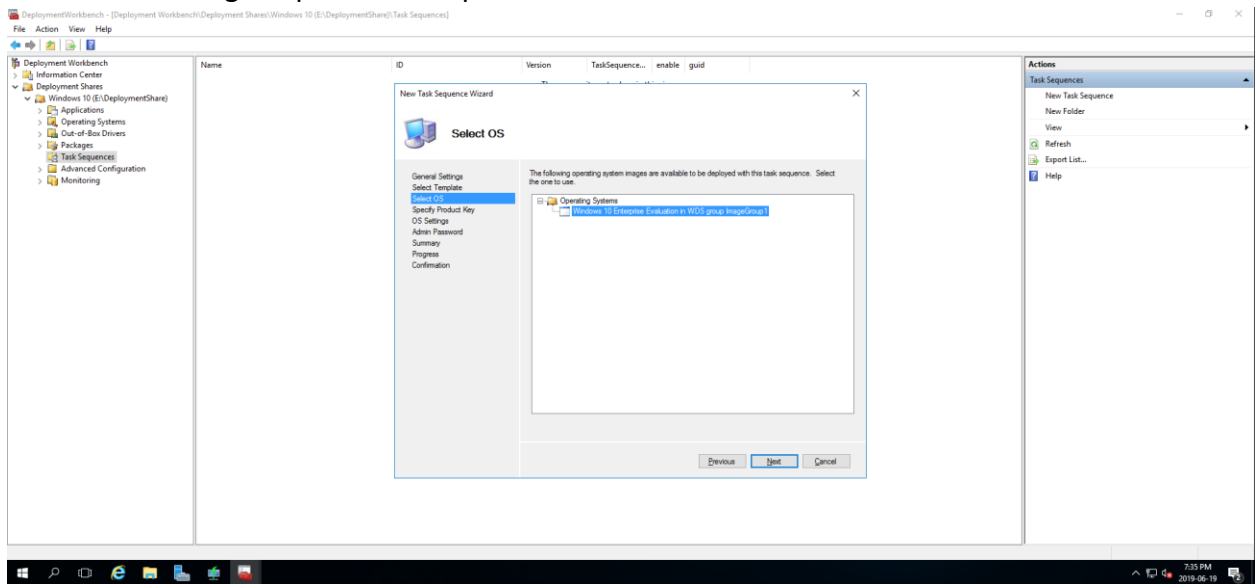

40) Enter a task sequence id and name

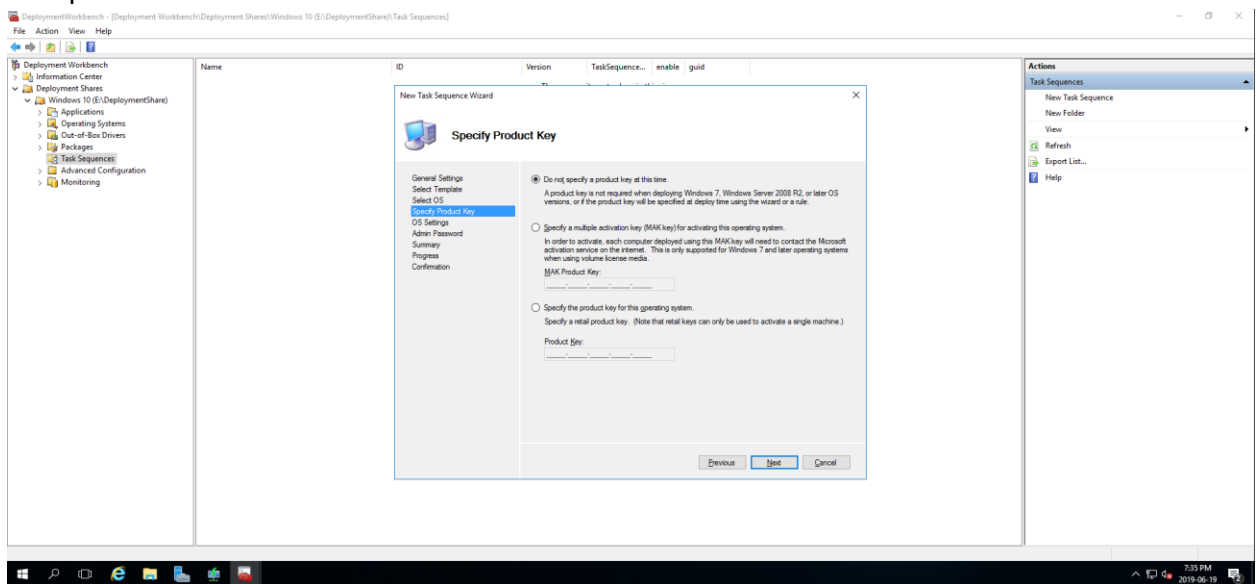

41) Select "standard client task sequence"

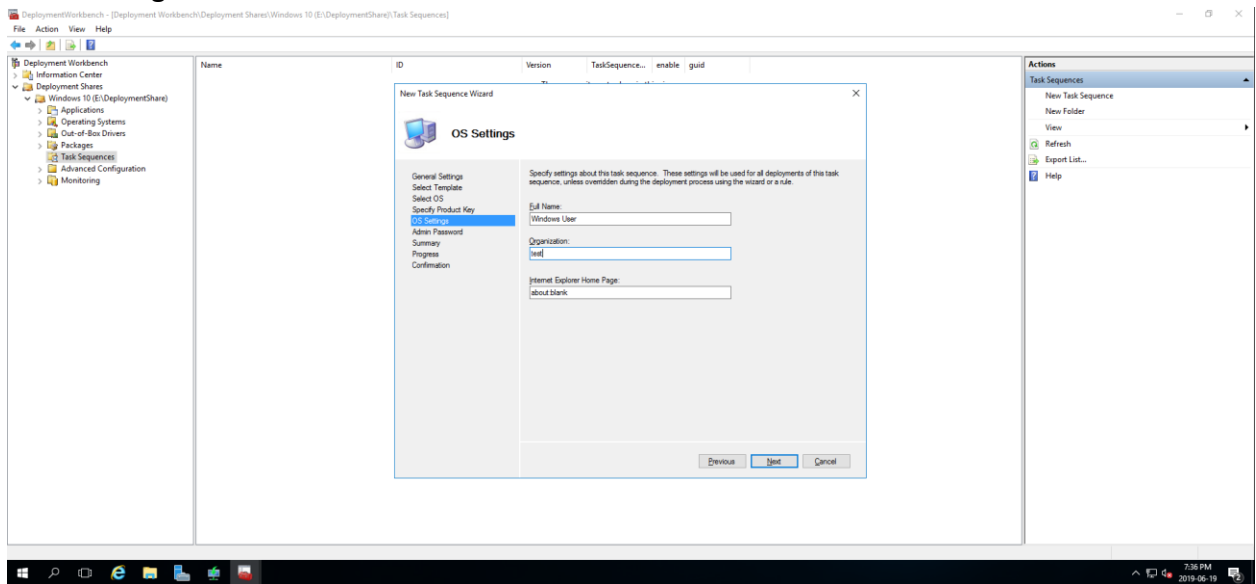

42) Select install image imported in step 24

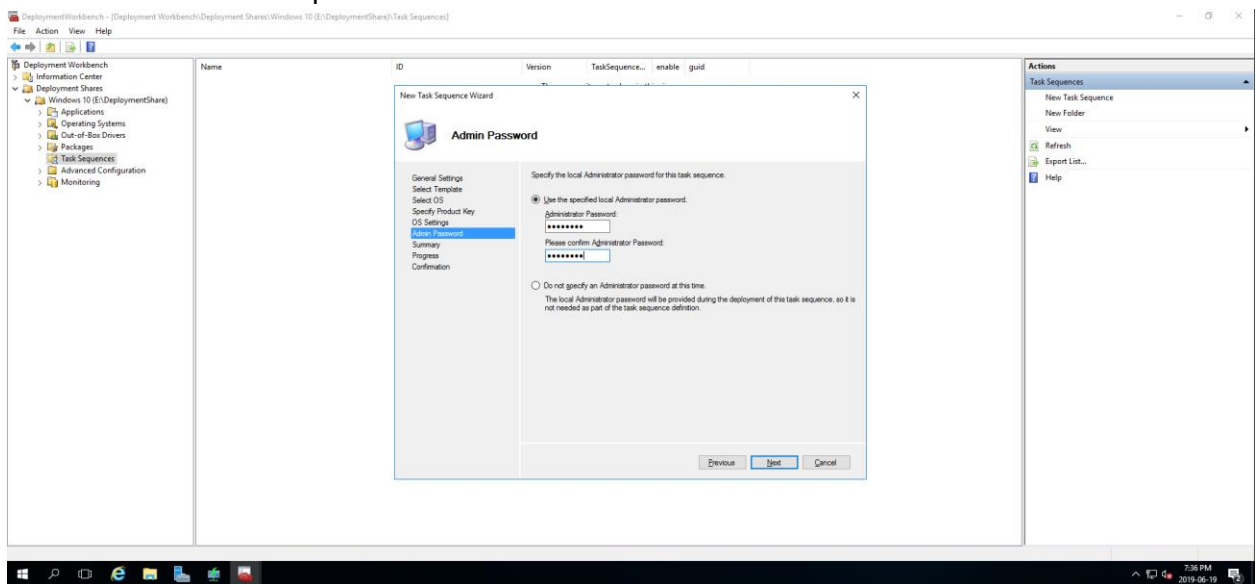

43) Accept defaults

44) Enter an organization name

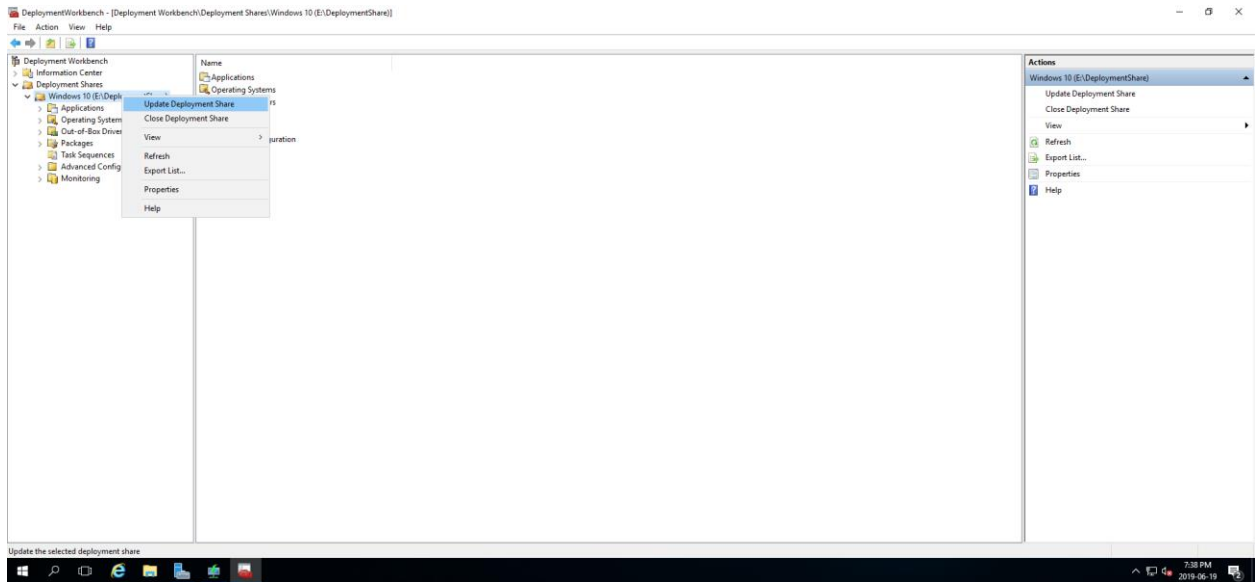

45) Enter an Administrator password

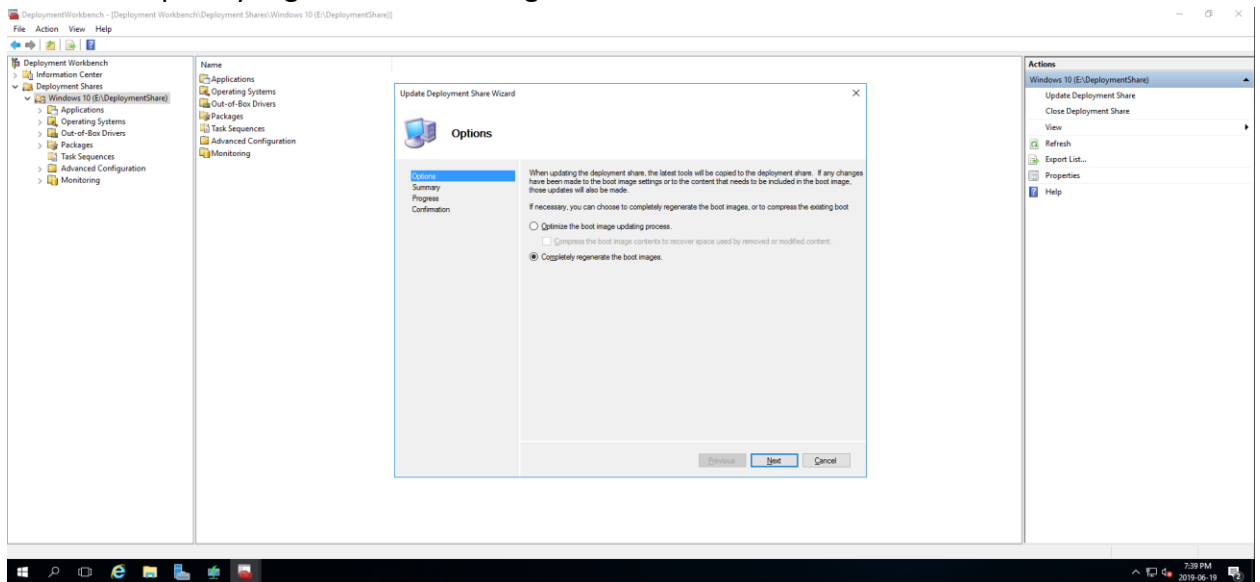

46) Click next 2 times > finish

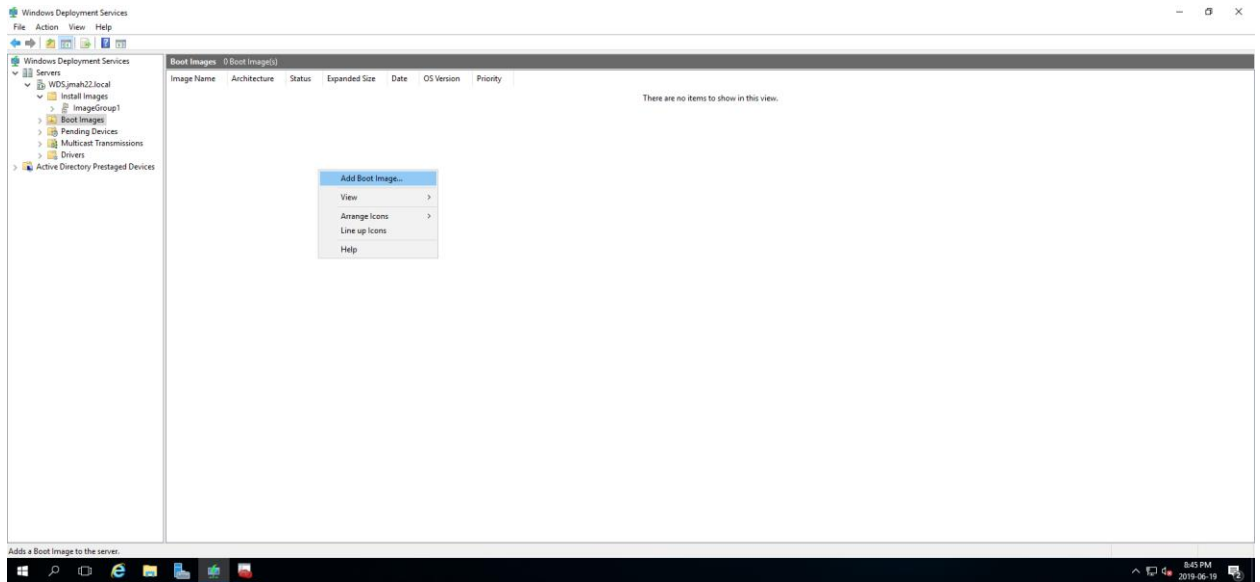

47) Right click *deployment share name* > update deployment share

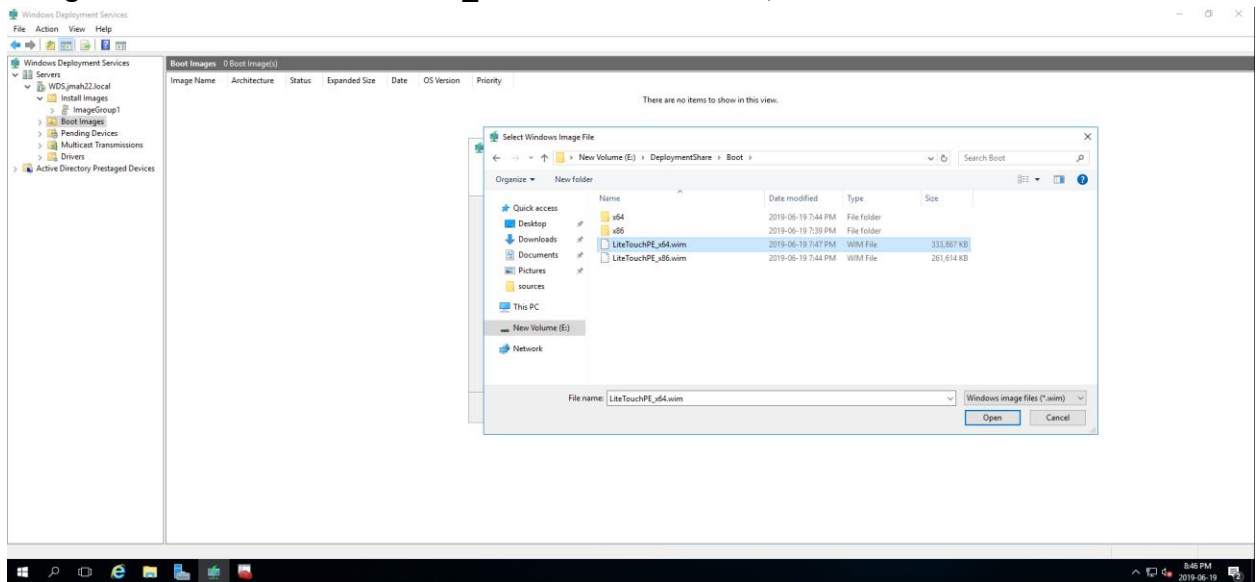

48) Select “completely regenerate boot images” > click next

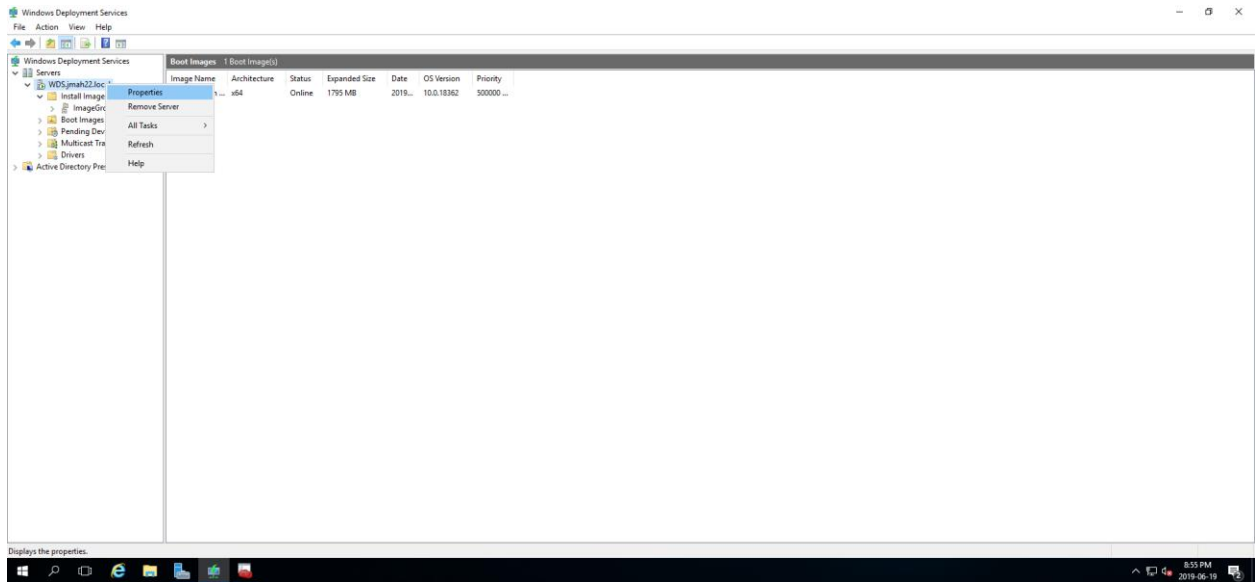

49) On WDS, right click boot images > Add Boot Image

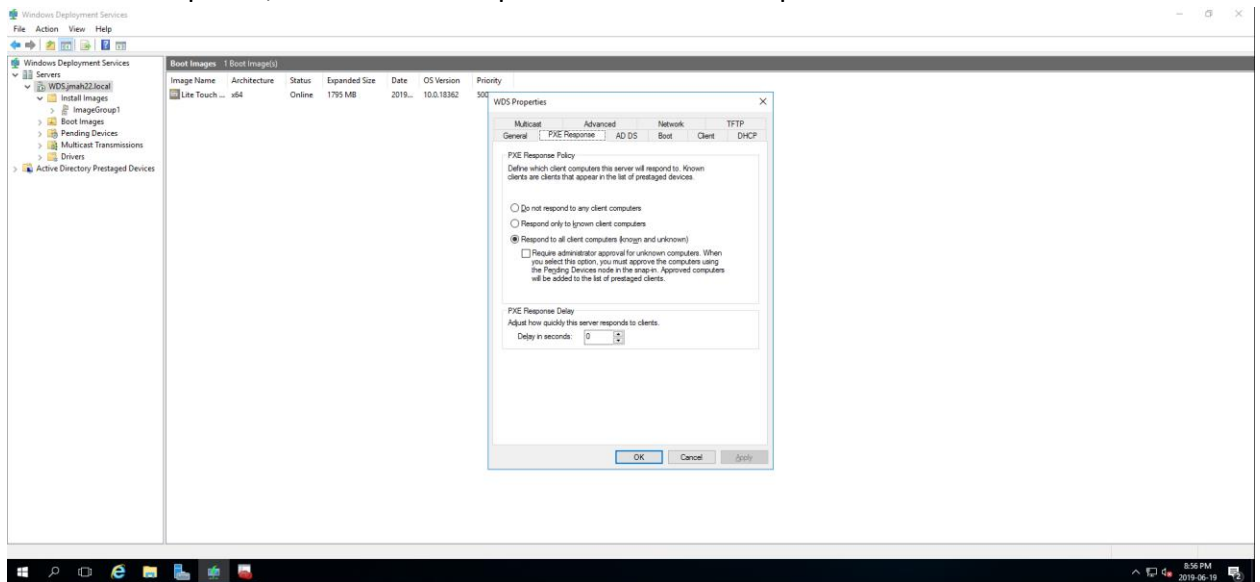

50) Navigate to where the LiteTouchPE_x64.wim file is located, click next 3 times

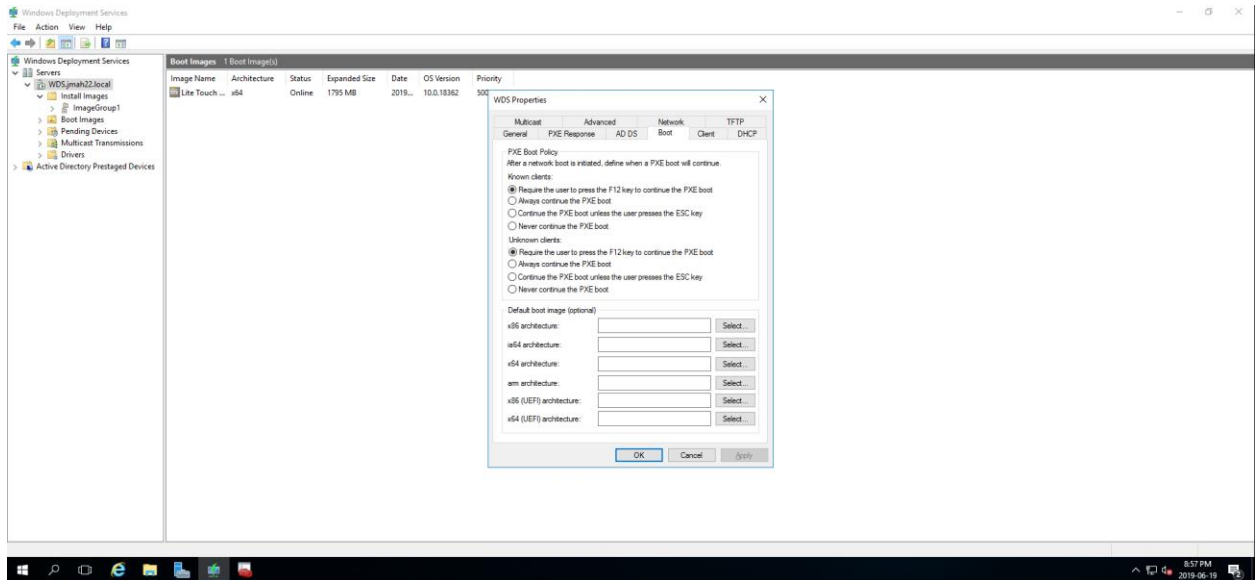

51) Right click *server name* > properties

52) Select PXE response, ensure that "Respond to all client computers" is selected

with the PXE options you can force the client computer to perform a PXE boot by default or require the user to push F12 to boot

53) On your client machines push F12 to perform a PXE boot

```
Network boot from Intel E1000e

CLIENT MAC ADDR: 00 0C 29 76 DD 45  GUID: 564D73CA-34F7-7DE7-C41B-7BC96D76DD45
CLIENT IP: 192.168.202.152  MASK: 255.255.255.0  DHCP IP: 192.168.202.254
GATEWAY IP: 192.168.202.2

Downloaded WDSNBP from 192.168.202.151 WDS.jmah22.local

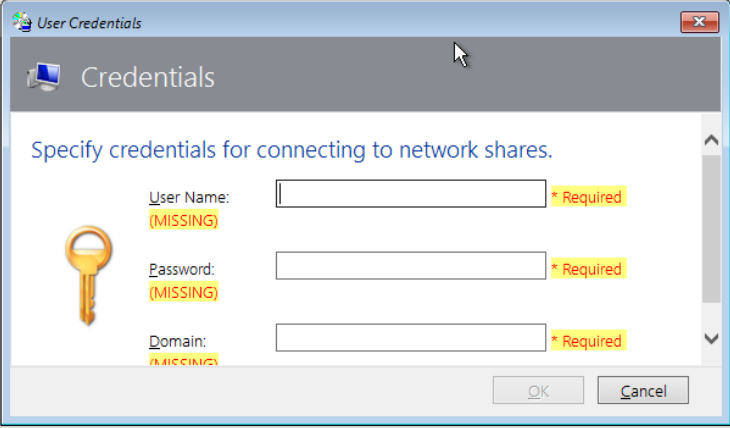

Press F12 for network service boot
```

Loading files...

IP: 192.168.202.151, File: \Boot\x64\Images\LiteTouchPE_x64.wim

54) Follow the steps to complete the imaging

Microsoft Deployment Toolkit

The image shows a screenshot of the 'User Credentials' dialog box in the Microsoft Deployment Toolkit. The dialog box has a title bar with the text 'User Credentials' and a close button. Below the title bar is a header area with a computer icon and the word 'Credentials'. The main area contains the instruction 'Specify credentials for connecting to network shares.' followed by three input fields: 'User Name:', 'Password:', and 'Domain:'. Each field has a yellow 'MISSING' label below it and a yellow '* Required' label to its right. A yellow key icon is positioned to the left of the input fields. At the bottom right of the dialog box are 'OK' and 'Cancel' buttons.

User Data (Restore)
[Locale and Time](#)
[Capture Image](#)
[Ready](#)

Specify whether to restore user data.

☒ Do not restore user data and settings.
This is not a replacement computer, so there are no user data and settings to restore.

☐ Specify a location.
Restore user data and settings from a network location created from a different machine.

Location:

(Full network path to previously saved USMT data files).
