

How to Automate a Windows Deployment with Microsoft Deployment Tools

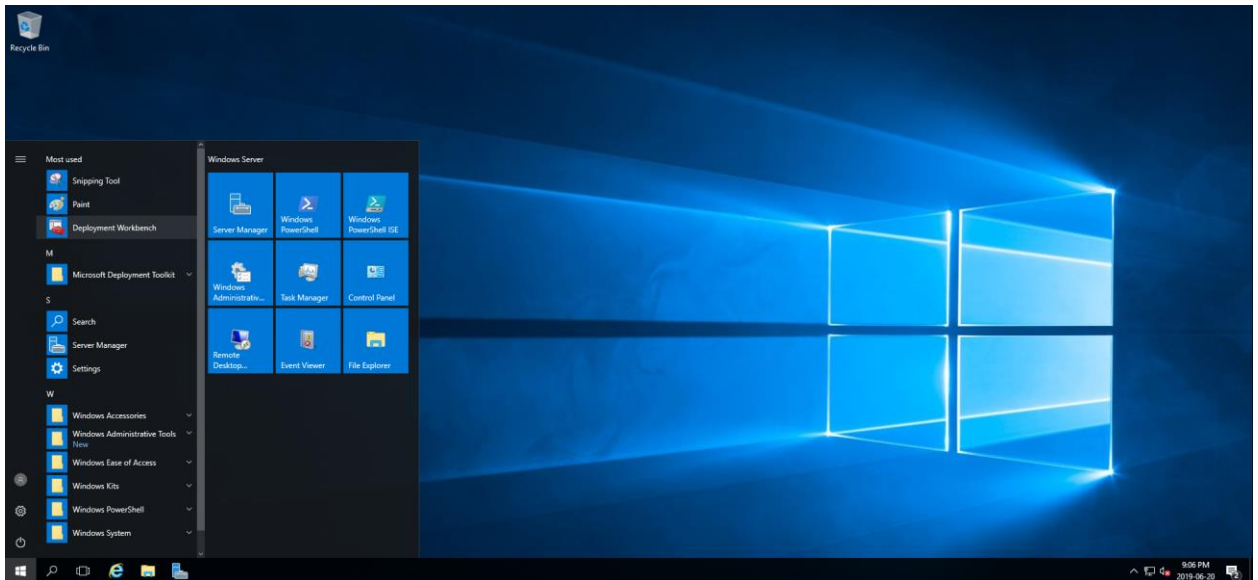

By Justin Mah

Requirements

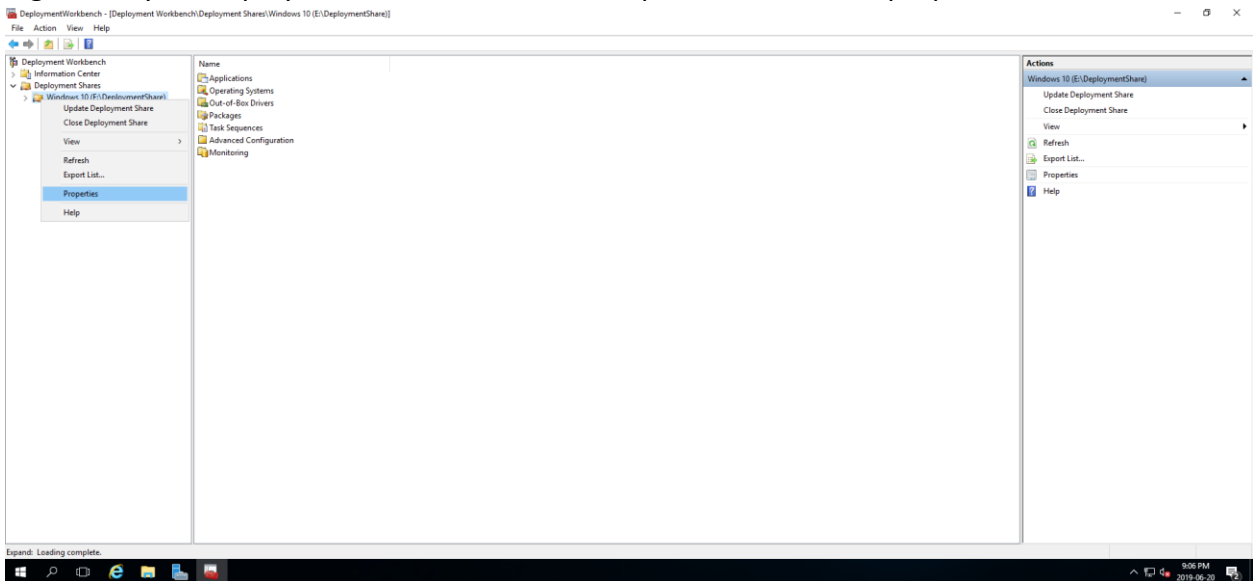

- Windows Deployment Services server with Microsoft Deployment Toolkit installed and a Deployment already created in “How to Create a Windows Deployment Services Server with Microsoft Deployment Toolkit”

Steps

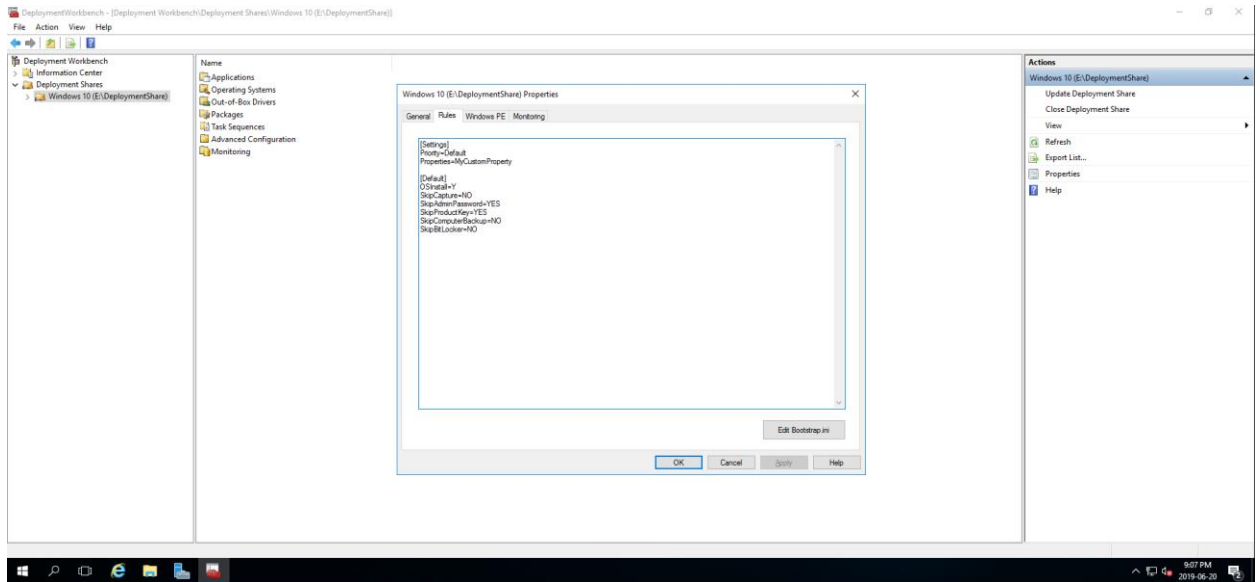

1) Open Deployment Workbench

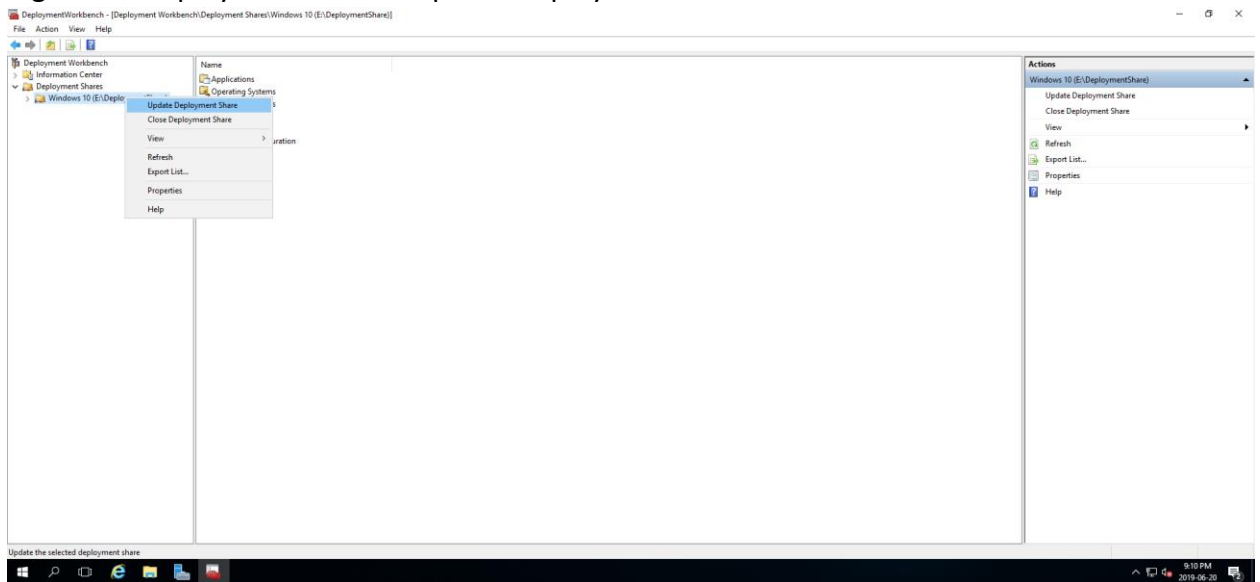

2) Right click your deployment share created in the previous tutorial > properties

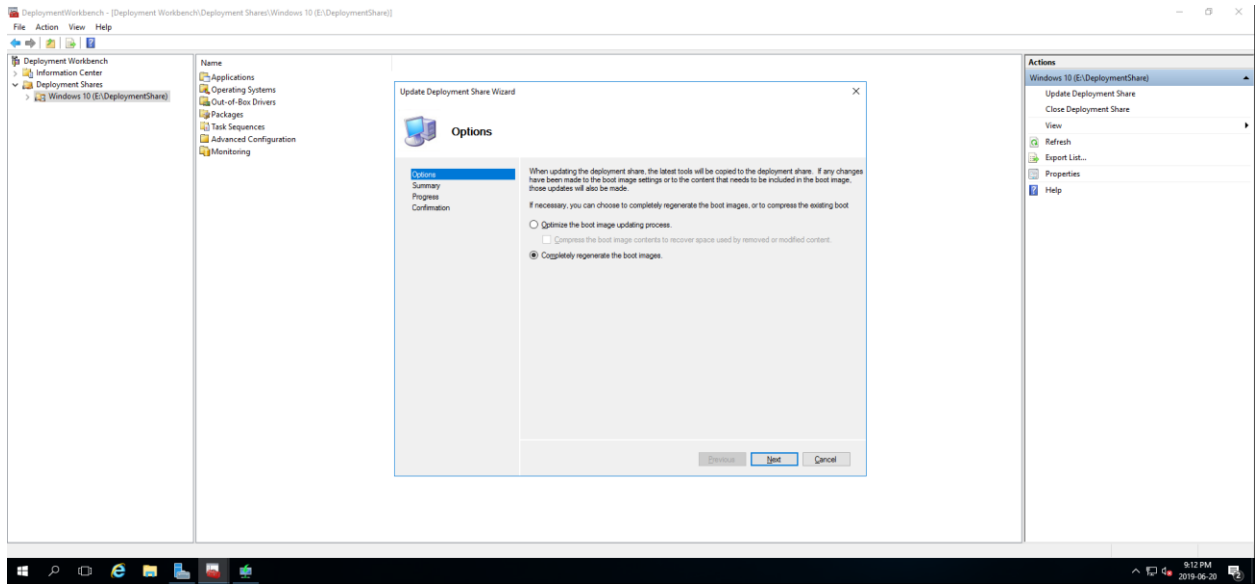

3) Click rules and edit this portion as needed > click apply when finished

4) Right click deployment share > Update Deployment Share

5) Select “Completely Regenerate the Boot Images” > click next 2 time

6) If you have any old LiteTouch_x64 boot images, remove them

7) Add the new LiteTouch_x64.wim to your boot images
